OBJECTIVE:

Enable the student to understand the behaviour of deformable structural elements, subjected to different types of loadings

UNIT I STRESS, STRAIN AND DEFORMATION OF SOLIDS 12

Rigid and deformable bodies – Stability, strength and stiffness - Axial and Shear Stresses – Deformation of simple and compound bars – Thermal stresses – Biaxial state of stress – Elastic Constants - Stresses and deformation of thin cylindrical and spherical shells – Stresses at a point – Stress tensor - Stresses on inclined planes – Principal stresses and principal planes – Mohr’s circle of stress.

UNIT II ANALYSIS OF PLANE TRUSSES 12

Stability and equilibrium of plane frames – perfect frames - types of trusses – Analysis of forces in truss members – Method of joints – Method of tension co-efficient – Method of sections.

UNIT III BENDING OF BEAMS 12

Beams – types and transverse loading on beams – shear force and bending moment in beams – Cantilever beams – Simply supported beams and over-hanging beams - Theory of simple bending – bending stress distribution – Load carrying capacity – Proportioning of sections – Leaf springs – Flitched beams – Shear stress distribution.

UNIT IV TORSION 12

Theory of simple torsion - Stresses and deformation in circular and hollow shafts – Stepped shafts – Shafts fixed at both ends – Stresses and deflection in helical springs.

UNIT V DEFLECTION OF BEAMS 12

Double Integration method – Macaulay’s method – Area moment method – Conjugate beam method for computation of slopes and deflections in determinate beams.

L: 45 + T: 15 TOTAL: 60 PERIODS

TEXT BOOKS:

1. Egor. P.Popov, “Engineering Mechanics of Solids” Prentice Hall of India, New Delhi, 2001
2. Vazirani, N, Ratwani, M, “Analysis of Structures” Khanna Publishers, New Delhi, 2001
3. Rajput, R.K, “Strength of Materials”, S Chand & Company Ltd., New Delhi, 2006

REFERENCES:

1. Irwing H.Shames, James M.Pitarresi, “Introduction to Solid Mechanics”, Prentice Hall of India, New Delhi, 2002
2. Roger T.Fenner, “ Mechanics of Solids”, ELBS, Oseny Mead, Oxford, 1990
3. Malhotra, D.R. Gupta, H.C., “The Strength of Materials”, Satya Prakashan (Tech. India Publications), New Delhi, 1995.
4. Beer.F.P. & Johnston.E.R, “Mechanics of Materials”, Tata McGraw Hill, New Delhi, 2004.
5. Elangovan.A., “Thinmavisaiyiyal” (Mechanics of Solids in Tamil), Anna University,1995.

OBJECTIVE:

The student is introduced to the mechanics of fluids through a thorough understanding of the properties of the fluids, behaviour of fluids under static conditions. The dynamics of fluids is introduced through the control volume approach which gives an integrated understanding of the transport of mass, momentum and energy. 2. The applications of the conservation laws to a) flow measurements b) flow through pipes (both laminar and turbulent) and c) forces on vanes is studied.

UNIT I FLUIDS PROPERTIES AND FLUID STATICS 12

Scope of fluid mechanics - Definitions of a fluid - Methods of analysis - Dimensions and units - viscosity, density, perfect gas, vapour pressure and surface tension - Basic equation of fluid statics - Pressure measurements - Manometers. - Forces on plane and curved surfaces - Buoyancy and floatation - Stability of floating bodies - Relative equilibrium.

UNIT II BASIC CONCEPTS OF FLUID FLOW 12

(a) Kinematics – Methods of describing fluid motion - Classification of flows - Streamline, streak-line and path-lines - Stream function and velocity potentials - Flow nets; (b) Dynamics - Dimensional Concepts of System and Control volume - Application of control volume to continuity, energy and momentum - Euler's equation of motion along a stream line - Bernoulli's equation - Applications to velocity and discharge measurements - Linear momentum equation and moment-of-momentum equations and their applications.

UNIT III DIMENSIONAL ANALYSIS AND MODEL STUDIES 12

Fundamental dimensions - dimensional homogeneity - Rayleigh's method and Buckingham Pi-Theorem - Dimensionless parameters - Similitude and model studies. Distorted Models.

UNIT IV INCOMPRESSIBLE VISCOUS FLOW 12

Laminar flow between parallel plates, and pipes - Development of laminar and turbulent flows in pipes - Reynolds experiment - Darcy-Weisbach equation - Moody diagram - Major and minor losses of flow in pipes - Pipes in series and in parallel.

UNIT V BOUNDARY LAYERS 12

Definition of boundary layers - Displacement, momentum and energy thickness - Laminar and turbulent boundary layers - Momentum integral equation - Separation of boundary layer - Drag and Lift - Lift characteristics of airfoils - Induced drag - Polar Diagram.

L: 45 + T: 15 TOTAL: 60 PERIODS

TEXT BOOKS:

1. Streeter, V.L. and Wylie, E. B., "Fluid Mechanics", McGraw Hill, New York, 1983
2. John F.Douglas, Janusz M. Gasiorek, and John A.Swaffield, "Fluid Mechanics", Pearson Education Ltd, New Delhi, Fourth Edition, 2001.

REFERENCES:

3. Roberson J.A and Crowe C.T., Engineering Fluid Mechanics. Jaico Books Mumbai, 2000.

OBJECTIVE:

The objective of this course is to introduce the principles of surveying, various methods and applications to Civil Engineering projects.

UNIT I INTRODUCTION AND CHAIN SURVEYING 8

Definition - Principles - Classification - Field and office work – Precision and Accuracy - Scales - Conventional signs - Survey instruments - Ranging and chaining - Reciprocal ranging - Setting perpendiculars - well - conditioned triangles - Traversing - Plotting - Enlarging and reducing figures.

UNIT II COMPASS SURVEYING AND PLANE TABLE SURVEYING 7

Prismatic compass - Surveyor's compass - Bearing - Systems and conversions - Local attraction - Magnetic declination - Dip - Traversing - Plotting - Adjustment of error - Plane table instruments and accessories - Merits and demerits - Methods - Radiation - Intersection - Resection - Traversing.

UNIT III LEVELLING 12

Level line - Horizontal line - Levels and Staves - Spirit level - Sensitiveness - Bench marks - Temporary and permanent adjustments - Fly and check levelling - Booking - Reduction - Curvature and refraction - Reciprocal levelling - Longitudinal and cross sections - Plotting - Calculation of areas and volumes - Contouring - Methods - Characteristics and uses of contours - Plotting - Earth work volume - Capacity of reservoirs.

UNIT IV THEODOLITE SURVEYING 8

Theodolite - Vernier and microptic - Description and uses - Temporary and permanent adjustments of vernier transit - Horizontal angles - Vertical angles - Heights and distances - Traversing - Closing error and distribution - Gale's tables - Omitted measurements.

UNIT V SURVEY APPLICATIONS 10

Reconnaissance, preliminary and location surveys for engineering projects - Lay out - Setting out works - Route Surveys for highways, railways and waterways - Curve ranging - Horizontal and vertical curves - Simple curves - Setting with chain and tapes, tangential angles by theodolite, double theodolite - Compound and reverse curves - Transition curves - Functions and requirements - Setting out by offsets and angles - Vertical curves - Sight distances - Mine Surveying - instruments - Tunnels - Correlation of under ground and surface surveys - Shafts - Adits.

ENGINEERING GEOLOGY

L T P C
3 0 0 3

OBJECTIVES:

At the end of this course the student shall be able to understand about geological formations, classification and morphology of rocks, and the importance of the study of geology for civil engineers with regard to founding structures like dams, bridges, buildings, etc. The student shall also be able to appreciate the importance of geological formation in causing earthquakes and land slides.

UNIT I PHYSICAL GEOLOGY 9

Geology in civil engineering – branches of geology – structure of earth and its composition – weathering of rocks – landforms and processes associated with river, wind and sea – relevance to civil engineering.

UNIT II MINEROLOGY 9

Physical properties of minerals. Study of the following rock forming minerals – Quartz group, Feldspar group, Pyroxene group, Amphibole and Mica group, Calcite Gypsum and Clay minerals.

UNIT III PETROLOGY 9

Classification of rocks, distinction between Igneous, Sedimentary and Metamorphic rocks. Engineering properties of rocks. Description, occurrence, engineering properties, distribution and uses of : Granite, Syenite, Diorite, Gabbro, Dolerite, Basalt, Sandstone, Limestone, Laterite, Shale, Conglomerate, Breccia, Quartzite, Marble, Slate, Gneiss and Schist.

UNIT IV STRUCTURAL GEOLOGY ANG GEOPHYSICAL METHODS 9

Geological maps – attitude of beds, study of structures - folds, faults and joints – relevance to civil engineering. Plate tectonics – Earthquakes – seismic zones in India. Geophysical methods – Seismic and electrical methods for subsurface investigations – prospecting for groundwater.

UNIT V GEOLOGICAL INVESTIGATION 9

Remote sensing for civil engineering applications; Geological conditions necessary for design and construction of Dams and Reservoirs, Tunnels, Buildings and Road cuttings. Investigation of Landslides, causes and mitigation.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. N. Chenna Kesavulu. Textbook of Engineering Geology, Macmillan India Ltd., 2007.
2. Venkat Reddy. Engineering Geology for Civil Engineers, D.Oxford & IBH, 1993.
3. Parbin Singh. A Text book of Engineering and General Geology, Katson publishing house, Ludhiana, 1993.

CE 9204**STRENGTH OF MATERIALS LABORATORY****L T P C
0 0 3 2****OBJECTIVES:**

To study the properties of materials when subjected to different types of loading.

List of experiments:

1. Tension test on mild steel / tor steel rod (Tensile strength-Density-Proof Stress- Stress Strain Curve -Youngs Modulus-)
2. Compression test on wood
3. Double shear test on metal
4. Torsion test on mild steel rod
5. Impact test on metal specimen
6. Hardness test on metals
7. Deflection test on metal beam
8. Compression test on helical spring
9. Deflection test on carriage spring
10. Tests on bricks, concrete cubes and tiles - Demonstration only

TOTAL: 45 PERIODS**REFERENCES:**

1. Relevant Indian Standards

CE 9205**COMPUTER AIDED BUILDING DRAWING****L T P C
0 0 4 2****OBJECTIVES:**

Building drawing in accordance with development and control rules satisfying orientation and functional requirements for the following.

1. An approach to planning – Function – Utility – People and their requirements – Extract from Building Rules and Bye- Laws’ – Planning of Residential and Public buildings.
2. Complete joinery Details (Paneled and Glazed Doors and Windows) & Codal Provisions.
3. Buildings with load bearing walls (R.C.C roof).
4. Buildings with sloping roof (R.C.C roof and Tiled roof).
5. R.C.C. framed structures.
6. Industrial buildings – North light roof structures – King Post Truss

TOTAL: 60 PERIODS

TEXT BOOKS:

1. Sikka V.B. "A Course in Civil Engineering Drawing" 4th Edition, S.K.Kataria and Sons, New Delhi, 1998.
2. George Omura, "Mastering in Autocad 2002"- BPB Publications, New Delhi, 2002

6. Relevant IS Codes.

CE 9206**SURVEY PRACTICALS – I****L T P C
0 0 4 2****OBJECTIVE:**

The objective of this course is to train the students to acquire skill in operation of various survey instruments and to obtain accurate results.

1. CHAIN AND COMPASS SURVEYING

Ranging and Chaining – Offsets - Traversing.

2. PLANE TABLE SURVEYING

Radiation – Intersection – Resection – Traversing

3. LEVELLING

Study of levels and levelling staff - Fly levelling using Dumpy level and Tilting level – Check Levelling.

4. THEODOLITE SURVEYING

Study of theodolites - Measurement of angles by reiteration and repetition - Measurement of vertical angles.

TOTAL: 60 PERIODS

OBJECTIVE:

To learn the computation of deflection of beams and trusses using energy principles, analysis of indeterminate beams and columns, state of stress in three dimensions.

UNIT I ENERGY PRINCIPLES 10

Strain energy and strain energy density – Strain energy in axial force - shear, flexure and torsion – Castigliano's and Engesser's theorems – Principle of virtual work – Application of energy theorems for computing deflections in beams, pin jointed frames – Maxwell's reciprocal theorem.

UNIT II INDETERMINATE BEAMS 9

Propped Cantilever and Fixed Beams – Fixed end moments reactions, slope and deflection for standard cases of loading — Continuous beams – support reactions and moments – Theorem of three moments – Shear Force and Bending Moment Diagrams

UNIT III COLUMNS 8

Behaviour of short and long columns. Euler's theory of long columns – Critical loads for prismatic columns with different end conditions - Rankine-Gordon Formula - Eccentrically loaded long columns -Eccentrically loaded short columns - middle third rule – core of section .

UNIT IV STATE OF STRESS IN THREE DIMENSIONS 8

Determination of principal stresses and principal planes – volumetric strain – Theories of failure – Principal stress, principal strain, shear stress, strain energy and distortion energy theories – Application in analysis of stress, load carrying capacity and design of members. Interaction problems - interaction curves.

UNIT V ADVANCED TOPICS 10

Unsymmetrical bending of beams - symmetrical and unsymmetrical sections, shear centre – stresses on curved beams for simple solid sections – Winkler Bach Formula – Thick cylinders – Compound cylinders - Residual stresses – Stress concentration – Fatigue and fracture.

5. Timoshenko, S.P. & Young D.H., "Elements of Strength of Materials, V Edition, Affiliated East-West Press Pvt. Ltd. New Delhi, 1998.

OBJECTIVE:

To make aware of the various techniques and practices on various stages of concreting, masonry works, service requirements, rehabilitation works and careful selection of suitable construction equipment.

UNIT I CONCRETE TECHNOLOGY 12

High grade cements – Advances in manufacture of cement –concrete chemicals and applications – concepts of mix design – statistical quality control of concrete – Mix Design as per BIS and ACI methods – Process of manufacture of concrete – Batching – Mixing – Transporting – Placing – Compaction of concrete – Curing – Finishing - Testing of fresh and hardened concrete – Non-destructive testing.

UNIT II CONSTRUCTION PRACTICES 10

Types of Foundations – Stones masonry – Brick masonry – Composite masonry – Cavity walls – Flooring – Formwork – Centering and Shuttering sheet piles – Slip and moving forms – Roofs and roof covering – Joints in Concrete – Plastering and Pointing – Shoring – Scaffolding – Under pinning – Submerge Structures.

UNIT III SERVICE REQUIREMENTS 8

Painting, Distempering and white washing – Fire Protection – Thermal insulation – Ventilation and air conditioning – Acoustics and Sound insulation – Damp proofing – Termite proofing.

UNIT IV REPAIR AND REHABILITATION WORKS 7

Causes of damage and deterioration in masonry and concrete structures – Symptoms and Diagnosis – Common types of repairs.

UNIT V CONSTRUCTION EQUIPMENT 8

Selection of equipment for earthwork, concreting, material hardening and erection of structures – Dewatering and pumping equipments.

TOTAL: 45 PERIODS

4. Gambhir, M.L., "Concrete Technology", Tata McGraw Hill Publishing Company, 1995.
5. Neville A.M., "Properties of Concrete" fourth edition, Pearson Education Ltd. 2004

OBJECTIVE:

To introduce the students to various hydraulic engineering problems like open channel flows and hydraulic machines. At the completion of the course, the student should be able to relate the theory and practice of problems in hydraulic engineering.

UNIT I	OPEN CHANNEL FLOW	12
Steady uniform flow - Best hydraulic sections for uniform flow - Specific energy and specific force.		
UNIT II	STEADY GRADUALLY VARIED FLOWS	13
Dynamic equation - Water surface flow profile classifications - Profile determination by graphical method, direct step method and standard step methods.		
UNIT III	RAPIDLY VARIED FLOWS	11
Hydraulic jumps - Types - Energy dissipation - Surges and surge through channel transitions.		
UNIT IV	TURBO MACHINES	13
Turbines – Classification - Reaction turbines – Francis turbine, Radial flow turbines, draft tube and cavitation - Propeller and Kaplan turbines - Impulse turbines - Performance of turbines - Similarity laws; Centrifugal pumps - Minimum speed to start the pump – NPSH - Cavitation in pumps - Operating characteristics - Multistage pumps.		
UNIT V	POSITIVE DISPLACEMENT PUMPS	11
Reciprocating pumps - Negative slip - Flow separation conditions - Air vessels, indicator diagrams and its variations - Savings in work done - Rotary pumps.

4. Srivastava. R., Flow through open channels, Oxford University Press, New Delhi, 2008.

OBJECTIVE:

The objective of this course is to equip the students with advanced methods of surveying and to introduce elements of photogrammetry, electromagnetic distance measurement, cartography, hydrographic surveying and cadastral surveying.

UNIT I TACHEOMETRIC SURVEYING 6

Tacheometric systems - Tangential, stadia and subtense methods - Stadia systems - Horizontal and inclined sights - Vertical and normal staffing - Fixed and movable hairs - Stadia constants - Anallactic lens - Subtense bar.

UNIT II CONTROL SURVEYING 8

Working from whole to part - Horizontal and vertical control methods - Triangulation - Signals - Base line - Instruments and accessories - Corrections - Satellite station - Reduction to centre - Trigonometrical levelling - Single and reciprocal observations - Modern trends.

UNIT III SURVEY ADJUSTMENTS 8

Errors - Sources, precautions and corrections - Classification of errors - True and most probable values - weighted observations - Method of equal shifts - Principle of least squares - Normal equation - Correlates - Level nets - Adjustment of simple triangulation networks.

UNIT IV ASTRONOMICAL SURVEYING 11

Celestial sphere - Astronomical terms and definitions - Motion of sun and stars - Apparent altitude and corrections - Celestial co-ordinate systems - Different time systems - Nautical almanac - Star constellations - Practical astronomy - Field observations and calculations for azimuth.

UNIT V MISCELLANY 12

Electromagnetic distance measurement - Carrier waves - Principles - Instruments - Trilateration - Total Station - GPS Surveying - Hydrographic Surveying - Tides - MSL - Sounding and methods - Location of soundings and methods - Three point problem - Strength of fix - Sextants and station pointer - River surveys - Measurement of current and discharge - Cadastral surveying - Definition - Uses - Legal values - Scales and accuracies.

OBJECTIVE:

To impart knowledge on behaviour and the performance of saturated soil. At the end of this course student attains adequate knowledge in assessing both Physical and Engineering behaviour of soils, mechanism of stress transfer in two-phase systems and stability analysis of slope.

UNIT I SOIL CLASSIFICATION AND COMPACTION 9

Nature of soil – phase relationships – Soil description and classification for engineering purposes, their significance – BIS Classification system – Soil compaction – Theory, comparison of laboratory and field compaction methods – Factors influencing compaction behaviour of soils.

UNIT II SOIL WATER AND WATER FLOW 7

Soil water – static pressure in water – capillary stress – Permeability measurement in the laboratory and field – pumping in and pumping out tests – factors influencing permeability of soils – Seepage – introduction to flow net – Simple problems (sheet pile and wier).

UNIT III STRESS DISTRIBUTION AND SETTLEMENT 11

Effective stress concepts in soils – Stress distribution in soil media – Boussinesq theory - Use of Newmarks influence chart – Components of settlement — immediate and consolidation settlement – Terzaghi’s one dimensional consolidation theory – computation of rate of settlement- \sqrt{t} and $\log t$ methods - Factors influencing settlement characteristics of soils.

UNIT IV SHEAR STRENGTH 9

Shear strength of cohesive and cohesionless soils – Mohr – Coulomb failure theory – Measurement of shear strength, direct shear – Triaxial compression, UCC and Vane shear tests – Cyclic loading – Pore pressure parameters.

UNIT V SLOPE STABILITY 9

Slope failure mechanisms – Types of slopes and infinite slopes – finite slopes – Total stress analysis for saturated clay – Fellenius method - Friction circle method – Use of stability number - slope protection measures.

TOTAL: 45 PERIODS

ENVIRONMENTAL SCIENCE AND ENGINEERING

L T P C
3 0 0 3

AIM

To create awareness in every engineering graduate about the importance of environment, the effect of technology on the environment and ecological balance and make them sensitive to the environment problems in every professional endeavour that they participate

OBJECTIVE:

At the end of this course the student is expected to understand what constitutes the environment, what are precious resources in the environment, how to conserve these resources, what is the role of a human being in maintaining a clean environment and useful environment for the future generations and how to maintain ecological balance and preserve bio-diversity. The role of government and non-government organization in environment managements.

UNIT I ENVIRONMENT, ECOSYSTEMS AND BIODIVERSITY 14

Definition, scope and importance of environment – need for public awareness - concept of an ecosystem – structure and function of an ecosystem – producers, consumers and decomposers – energy flow in the ecosystem – ecological succession – food chains, food webs and ecological pyramids – Introduction, types, characteristic features, structure and function of the (a) forest ecosystem (b) grassland ecosystem (c) desert ecosystem (d) aquatic ecosystems (ponds, streams, lakes, rivers, oceans, estuaries) – Introduction to biodiversity definition: genetic, species and ecosystem diversity – biogeographical classification of India – value of biodiversity: consumptive use, productive use, social, ethical, aesthetic and option values – Biodiversity at global, national and local levels – India as a mega-diversity nation – hot-spots of biodiversity – threats to biodiversity: habitat loss, poaching of wildlife, man-wildlife conflicts – endangered and endemic species of India – conservation of biodiversity: In-situ and ex-situ conservation of biodiversity.

Field study of common plants, insects, birds

Field study of simple ecosystems – pond, river, hill slopes, etc.

UNIT II ENVIRONMENTAL POLLUTION 8

Definition – causes, effects and control measures of: (a) Air pollution (b) Water pollution (c) Soil pollution (d) Marine pollution (e) Noise pollution (f) Thermal pollution (g) Nuclear hazards – soil waste management: causes, effects and control measures of municipal solid wastes – role of an individual in prevention of pollution – pollution case studies – disaster management: floods, earthquake, cyclone and landslides.

Field study of local polluted site – Urban / Rural / Industrial / Agricultural.

UNIT III NATURAL RESOURCES 10

Forest resources: Use and over-exploitation, deforestation, case studies- timber extraction, mining, dams and their effects on forests and tribal people – Water resources: Use and over-utilization of surface and ground water, floods, drought, conflicts over water, dams-benefits and problems – Mineral resources: Use and exploitation, environmental effects of extracting and using mineral resources, case studies – Food resources: World food problems, changes caused by agriculture and overgrazing, effects of modern agriculture, fertilizer-pesticide problems, water logging, salinity, case studies – Energy resources: Growing energy needs, renewable and non renewable energy sources, use of alternate energy sources. case studies – Land resources: Land as a resource, land degradation, man induced landslides, soil erosion and desertification – role of an individual in conservation of natural resources – Equitable use of resources for sustainable lifestyles.

Field study of local area to document environmental assets – river / forest / grassland / hill / mountain.

UNIT IV SOCIAL ISSUES AND THE ENVIRONMENT 7

From unsustainable to sustainable development – urban problems related to energy – water conservation, rain water harvesting, watershed management – resettlement and rehabilitation of people; its problems and concerns, case studies – role of non-governmental organization- environmental ethics: Issues and possible solutions – climate change, global warming, acid rain, ozone layer depletion, nuclear accidents and holocaust, case studies. – wasteland reclamation – consumerism and waste products – environment production act – Air (Prevention and Control of Pollution) act – Water (Prevention and control of Pollution) act – Wildlife protection act – Forest conservation act – enforcement machinery involved in environmental legislation- central and state pollution control boards- Public awareness.

UNIT V HUMAN POPULATION AND THE ENVIRONMENT 6

Population growth, variation among nations – population explosion – family welfare programme – environment and human health – human rights – value education – HIV / AIDS – women and child welfare – role of information technology in environment and human health – Case studies.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Gilbert M.Masters, "Introduction to Environmental Engineering and Science", 2nd edition, Pearson Education, 2004.
2. Benny Joseph, "Environmental Science and Engineering", Tata McGraw-Hill, New Delhi, 2006.

REFERENCES:

1. R.K. Trivedi, "Handbook of Environmental Laws, Rules, Guidelines, Compliances and Standards", Vol. I and II, Enviro Media.
2. Cunningham, W.P. Cooper, T.H. Gorhani, "Environmental Encyclopedia", Jaico Publ., House, Mumbai, 2001.
3. Dharmendra S. Sengar, "Environmental law", Prentice hall of India PVT LTD, New Delhi, 2007.
4. Rajagopalan. R, "Environmental Studies-From Crisis to Cure", Oxford University Press, 2005.

OBJECTIVE:

Student should be able to verify the principles studied in theory by conducting the experiments

1. FLOW MEASUREMENT

Calibration of Flow Measuring instruments like Venturimeter, Orificemeter and Rotometer

2. LOSSES IN PIPES

Estimation of major and minor losses in pipes

3. PUMPS

Performance characteristics of pumps

4. TURBINES

Performance characteristics of turbines

5. WATER MANAGEMENT PARAMETERS

Recording and Non-Recording raingauges, pan evaporation, measurements, Double ring infiltrometer test and estimation of water management parameters such as soil water, field capacity, infiltration capacity.

SURVEY PRACTICALS - II

L T P C
0 0 4 2

OBJECTIVE:

The objective of this course is to train the students to acquire skill in making precise measurements and obtaining accurate results.

1. Setting out works - Foundation marking - Simple curve (right/left-handed) – Transition curve.
2. Theodolite Traversing
3. Heights and Distances – Triangulation problem – Single plane method
4. Tacheometry - Tangential system - Stadia system - Subtense system.
5. Field observation on SUN to calculate azimuth.
6. Experiments on Total Station – GPS.
7. Study of Micro Optic Theodolite - Digital Theodolite.

TOTAL: 60 PERIODS

CE 9301

STRUCTURAL ANALYSIS-I

L T P C
3 1 0 4

OBJECTIVE:

To learn the modern method of analysis of beams and frames.

UNIT I DEFLECTION OF DETERMINATE STRUCTURES 12

Principles of virtual work for deflections - Deflections of pin-jointed plane frames and rigid plane frames –Williott diagram.

UNIT II FLEXIBILITY MATRIX METHOD 12

Equilibrium and compatibility - Determinate vs indeterminate structures - Static and Kinematic –Indeterminacy - primary structure - Compatibility conditions - Analysis of indeterminate pin-jointed plane frames, continuous beams, rigid jointed plane frames

UNIT III SLOPE DEFLECTION METHOD 12

Slope deflection equations- Analysis of continuous beams and rigid frames (with and without sway) - Symmetry and antisymmetry – Simplification for hinged end - Support settlements.

UNIT IV MOMENT DISTRIBUTION METHOD 12

Stiffness and carry over factors – Distribution and carry over of moments - Analysis of continuous Beams - Plane rigid frames with and without sway.

UNIT V MATRIX STIFFNESS METHOD 12

Element and global stiffness matrices– Co-ordinate transformations – Rotation matrix-Compatibility matrix – transformations of stiffness matrices, load vectors and displacement vectors – Analysis of Continuous Beams – Analysis of pin-jointed plane frames and rigid frames, by direct stiffness method.

TEXT BOOKS:

CE 9302

DESIGN OF STEEL STRUCTURES

L T P C
3 0 0 3

OBJECTIVE:

To learn the design of Component and structure using steel and timber material subjected to external loading.

UNIT I SECTIONS AND JOINTS

12

Types of steel structures – Properties of rolled steel sections and Light gauge steel sections – Allowable Stresses as per IS code - Riveted and bolted connections – Failures of joints – Single and multiple riveted lap and butt joints under axial and eccentric loading – Strength of fillet and butt welded joints – Design of riveted and welded joints.

UNIT II TENSION MEMBERS

8

Design of simple and built-up members subjected to tension –Effective area of angles connected to gussets.

UNIT III COMPRESSION MEMBERS

8

Maximum slenderness ratio of various compression members – IS code provision for compression members – Design of simple and built-up compression members with lacings and battens – Design of column bases.

UNIT IV BEAMS

11

Design of simple beams based on strength and stiffness as per IS code – Design of built – up beams and curtailment of flange plates –Flange splice and web splice- Design of plate girder and stiffeners.

UNIT V TIMBER**6**

Study of properties and strength of natural and laminated timber – Allowable stresses in compression, tension and flexure as per IS Code – Types of joints with nails and bolts – Design of simple compression members as per IS code– Design of beams for strength and stiffness as per IS code.

CE 9303**FOUNDATION ENGINEERING****L T P C
3 0 0 3****OBJECTIVE:**

To impart knowledge on common method of sub soil investigation and design of foundations. At the end of this course student acquires the capacity to investigate the soil condition and to select and design a suitable foundation.

UNIT I SITE INVESTIGATION AND SELECTION OF FOUNDATION**9**

Scope and objectives – Methods of exploration – auguring and boring – Wash boring and rotary drilling – Depth of boring – Spacing of bore hole – Sampling techniques – Representative and undisturbed sampling methods - Split spoon sampler, Thin wall sampler, Stationery piston sampler – Bore log report – Samples Penetration Tests (SPT and SCPT) – Data interpretation - strength parameters and liquefaction potential - Selection of foundation based on soil conditions.

UNIT II SHALLOW FOUNDATION**9**

Introduction – Location and depth of foundation – Codal provisions – bearing capacity of shallow foundation on homogeneous deposits – Terzaghi’s formula and BIS formula – factors affecting bearing capacity – problems – Bearing capacity from in-situ tests (SPT, SCPT and plate load) – Allowable bearing pressure – Seismic considerations in bearing capacity evaluation. Determination of Settlement of foundations on granular and clay deposits – Total and differential settlement – Allowable settlements – Codal provision – Methods of minimizing total and differential settlements.

UNIT III FOOTINGS AND RAFTS**9**

Types of foundation – Contact pressure distribution below footings and raft: Isolated footing – Combined footings – Types and proportioning – Mat foundation – Types – Applications – Proportioning – Floating foundation – Seismic force consideration – Codal Provision.

UNIT IV PILE FOUNDATION**9**

Types of piles and their function – Factors influencing the selection of pile – Carrying capacity of single pile in granular and cohesive soil – static formula – dynamic formulae (Engineering news and Hileys) – Capacity from insitu tests (SPT and SCPT) – Negative skin friction – uplift capacity- Group capacity by different methods (Feld's rule, Converse – Labarre formula and block failure criterion) – Settlement of pile groups – Interpretation of pile load test (routine test only) – Underreamed piles – Capacity under compression and uplift.

UNIT V RETAINING WALLS**9**

Plastic equilibrium in soils – active and passive states – Rankine's theory – cohesionless and cohesive soil – Coulomb's wedge theory – Condition for critical failure plane – Earth pressure on retaining walls of simple configurations – Culmann Graphical method – pressure on the wall due to line load – Stability analysis of retaining walls.

6. Venkatramaiah, C., "Geotechnical Engineering", New Age International Publishers, New Delhi, 2007 (Reprint).

OBJECTIVE:

Principles and design of water treatment and distribution will be covered. Relevant BIS codes and GOI Manuals will be referred.

UNIT I SOURCES OF WATER 9

Public water supply system – Planning, Objectives, Design period, Population forecasting; Water demand – Sources of water and their characteristics, Surface and Groundwater – Impounding Reservoir -Well hydraulics – Development and selection of source – Source Water quality – Characterization – Drinking Water quality standards.

UNIT II CONVEYANCE FROM THE SOURCE 9

Water supply – intake structures – Functions and drawings; Pipes and conduits for water – Pipe materials – Hydraulics of flow in pipes – Transmission main design- Laying, jointing and testing of pipes –appurtenances- Drawings;– Types and capacity of pumps – Selection of pumps and pipe materials.

UNIT III WATER TREATMENT 10

Objectives – Unit operations and processes – Principles, functions design and drawing of flash mixers, flocculators, sedimentation tanks and sand filters; Disinfection –THM; Iron and Manganese removal, Defluoridation - Residue Management – Corrosion Control; Construction, Operation and Maintenance aspects-Layout and Hydraulic Profile of water treatment plants.

UNIT IV ADVANCED WATER TREATMENT 7

Water softening - Desalination -demineralization – Adsorption -Membrane Systems - Construction and Operation & Maintenance aspects – Recent advances.

UNIT V WATER DISTRIBUTION AND SUPPLY TO BUILDINGS 10

Requirements of water distribution – Components – Selection of pipes material - Service reservoirs – Functions and drawings – Network design – Economics – Computer applications – (Analysis of distribution networks) – Appurtenances – operation and maintenance – Leak detection.

Principles of design of water supply in buildings – House service connection – Fixtures and fittings; Systems of plumbing and drawings of types of plumbing.

TOTAL: 45 PERIODS**TEXT BOOKS:**

2. Syed R.Qasim and Edward M.Motley Guang Zhu, Water Works Engineering Planning, Design and Operation, Prentice Hall of India Private Limited, New Delhi, 2006.

OBJECTIVE:

To give an overview / basis of highway engineering with respect to the development, planning, design, construction and maintenance of highways.

UNIT I HIGHWAY PLANNING AND ALIGNMENT 8

History of road development in India – Classification of highways – Institutions for Highway planning, design and implementation at different levels – factors influencing highway alignment – Engineering surveys for alignment, objectives, conventional and modern methods.

UNIT II GEOMETRIC DESIGN OF HIGHWAYS INCLUDING HILL ROADS 10

Typical cross sections of Urban and Rural roads – Lateral and vertical clearance at underpasses – Cross sectional elements – Horizontal curves, super elevation, transition curves, widening of curves – Sight distances – Vertical curves, gradients, hairpin bends – IRC standards

UNIT III DESIGN FLEXIBLE AND RIGID PAVEMENTS 9

Design principles – pavement components and their role - Design practice for flexible and rigid pavements, (IRC methods only).

UNIT IV HIGHWAY CONSTRUCTION MATERIALS, EQUIPMENTS AND PRACTICE 8

Highway construction materials, properties, testing methods – Construction practice including modern methods, concrete road constructions (problem not included) - Highway drainage – Special considerations for hilly roads.

UNIT V EVALUATION AND MAINTENANCE OF PAVEMENTS 10

Pavement distress in flexible and rigid pavement – Pavement evaluation, roughness, present serviceability index, skid resistance, structural evaluation, evaluation by deflection measurements – Strengthening of pavements –Types of maintenance – IRC standards

5. Sharma.S.K Principles , Practices and Design of Highway Engineering, S.Chand and Company Ltd.,1995
6. O'Flaherty.C.A Highways, Butterworth – Heinemann, Oxford, 2006

OBJECTIVE:

To make students understand the various hydrological processes, estimate the surface and groundwater resources of a drainage basin and to estimate the hydrologic extremes i.e. floods and droughts and their management.

UNIT I HYDROLOGIC PROCESSES 9

Introduction – Hydrometeorology - Hydrologic cycle - Precipitation and its types - measurements - evaporation, evapotranspiration, infiltration and other abstractions.

UNIT II SURFACE RUNOFF 9

Drainage basins – hydrologic losses and rainfall excess – hydrograph analysis – unit hydrograph – S-curve Synthetic unit hydrograph – Rainfall-runoff models - SCS method – stream flow measurements.

UNIT III GROUNDWATER 9

Groundwater concepts – properties and types of aquifer – saturated flow – steady state one dimensional flow – steady state well hydraulics – unsteady groundwater flow – Theis method and Jacobs method – Ground Water Estimation by GEC norms - geophysical exploration - sea water intrusion.

UNIT IV RESERVOIR PLANNING AND MANAGEMENT 9

Single and multipurpose projects – dams – types – fixation of storage capacity – Strategies for reservoir operation – reservoir sedimentation.

UNIT V FLOODS AND DROUGHTS 9

Definition of floods and droughts – frequency analysis – flood control measures – Inter basin water transfer – drought indices - drought prone area programme – artificial recharge – rain water harvesting.

SOIL MECHANICS LABORATORY

L T P C
0 0 4 2

OBJECTIVE:

At the end of the course student attains adequate knowledge in assessing both Physical and Engineering properties of soils through laboratory testing procedures.

LIST OF EXPERIMENTS:

1. Specific gravity of soil solids
2. Grain size distribution – Sieve analysis
3. Grain size distribution - Hydrometer analysis
4. Liquid limit and Plastic limit tests
5. Shrinkage limit and Differential free swell tests
6. Field density Test (Sand replacement method)
7. Determination of moisture – density relationship using standard Proctor compaction test.
8. Permeability determination (constant head and falling head methods)
9. Direct shear test in cohesionless soil
10. Unconfined compression test in cohesive soil
11. Tri-axial compression test in cohesionless soil (Demonstration only)
12. Laboratory Vane Shear test in cohesive soil
13. One dimensional consolidation test (Determination of co-efficient of consolidation only)

HIGHWAY ENGINEERING LABORATORY

L T P C
0 0 4 2

OBJECTIVE:

To learn the principles and procedures of testing of highway materials

I. TESTS ON BITUMEN

1. Penetration
2. Softening Point
3. Ductility
4. Viscosity
5. Elastic Recovery
6. Storage Stability

II. TESTS ON AGGREGATES

1. Stripping
2. Soundness
3. Proportioning of Aggregates
4. Water Absorption

III. TESTS ON BITUMINOUS MIXES

1. Determination of Binder Content
2. Marshall Stability and Flow values
3. Specific Gravity
4. Density

TOTAL: 60 PERIODS

COMMUNICATION SKILLS AND SOFT SKILLS LAB

L T P C
0 0 2 1

OBJECTIVES:

- To equip students of engineering and technology with effective speaking and listening skills in English.
- To help them develop their soft skills and interpersonal skills, which will make the transition from college to workplace smoother and help them excel in their jobs.
- To enhance the performance of students at Placement Interviews, Group Discussions and other recruitment exercises.

A. Viewing and discussing audio-visual materials

1. Resume / Report Preparation / Letter Writing:

2

Letter writing – Job application with Resume - Project report - Email etiquette.

2. Presentation skills:

1

Elements of effective presentation – Structure of presentation - Presentation tools – Body language.

3. Soft Skills:

1

Time management – Stress management – Assertiveness – Negotiation strategies.

4. Group Discussion: 1

Group discussion as part of selection process, Structure of group discussion – Strategies in group discussion – Mock group discussions.

5. Interview Skills: 1

Kinds of interviews – Interview techniques – Corporate culture – Mock interviews. (Career Lab Software may be used for this section).

NOTE: Career Lab software may be used to learn the skills, to be applied in the practice session.

B. PRACTICE SESSION:

- | | |
|--|----------|
| 1. Resume / Report Preparation / Letter writing: Students prepare their own resume and report. | 4 |
| 2. Presentation Skills: Students make presentations on given topics. | 8 |
| 3. Group Discussion: Students participate in group discussions. | 6 |
| 4. Interview Skills: Students participate in Mock Interviews | 6 |

TOTAL: 30 PERIODS

6. Turton, N.D and Heaton, J.B, Dictionary of Common Errors, Addison Wesley Longman Ltd., Indian reprint, 1998.

OBJECTIVE:

To learn the influence lines and its uses in various applications like bridges, arches. Also to learn Plastic analysis of beams and rigid frames.

UNIT I MOVING LOADS AND INFLUENCE LINES 12

Influence lines for reactions in statically determinate structures – influence lines for member forces in pin jointed frames – Influence lines for shear force and bending moment in beam sections – Calculation of critical stress resultants due to concentrated and distributed moving loads.

UNIT II INFLUENCE LINES FOR INDETERMINATE STRUCTURES 12

Muller Breslau's principle – Application of Muller Breslau's principle to determinate beams and continuous beams.

UNIT III ARCHES 12

Arches structural forms – Examples of arch structures – Types of arches – Analysis of three hinged, two hinged and fixed arches parabolic and circular arches – Settlement and temperature effects

UNIT IV SUSPENSION BRIDGES AND SPACE TRUSSES 12

Analysis of suspension bridges – Unstiffened cables and cables with three hinged stiffening girders – Influence lines for three hinged stiffening girders. Introduction to analysis of space trusses using method of tension coefficients – Beams curved in plan.

UNIT V PLASTIC ANALYSIS 12

Statically indeterminate structures – Beams in pure bending – Plastic moment of resistance – Plastic modulus – Shape factor – Load factor – Plastic hinge and mechanism. Static and kinematic methods – Upper and lower bound theorems -Plastic analysis of indeterminate beams and frames.

OBJECTIVE:

To introduce the student to the concept of soil – Plant characteristics and their water requirements. At the completion of the course the students should be able to understand the necessity of planning an irrigation system to provide water at the right quantity and at right time.

UNIT I IRRIGATION PRINCIPLES 10

Need for irrigation – Advantages and ill effects – Development of irrigation – National Water Policy – Tamil Nadu scenario - Physical properties of soil that influence soil moisture characteristics – Concept of soil water potential and its components: Gravitational, Pressure and Osmotic- Retention of water in soils and concept of plant available water – Movement of water into and within the soils – Measurement of soil moisture content and the matric tension with which it is held

UNIT II IRRIGATION WATER REQUIREMENT AND CROPS 8

Soil- Water-Plant relationship - Water as a constituent of plant – Soil-Plant-Atmosphere continuum – Terminology in plant – Water relationships (Evapotranspiration, consumptive use and crop factor) – Critical stages of crop growth for water requirement – Analysis of crop water demand: basic concepts and estimation

UNIT III IRRIGATION SYSTEM COMPONENTS 11

Components of irrigation network; Diversion headworks, Canal regulators, Canal drop, canal cross drainage works, Canal outlets, - Functions of the above components – Canal lining - Supply of irrigation water: Duty, Delta and Base period – Concepts of Kennedy's and Lacey's formulae

UNIT IV FIELD TECHNIQUES 8

Field Measurements, Land leveling and drainage – Irrigation methods: relative merits and limitations – Evaluation of irrigation methods –Irrigation water quality - Irrigability of soils and the irrigation related degradation of soil resource (such as water logging, salinity and sodicity)

UNIT V IRRIGATION WATER MANAGEMENT 8

Need for interdisciplinary approach – Irrigation beneficiaries - Irrigation Efficiency- Irrigation scheduling concepts – methods of irrigation scheduling – On farm development works - Participatory approach: farmer's organization and turn over – Water Users Association – Economical aspects of irrigation

UNIT VI DESIGN AND DRAWING OF IRRIGATION STRUCTURES (FOR INTERNAL EVALUATION) 30

Design of Tank Surplus Weir – Tank Sluice with a Tower Head – Direct Sluice taking off from a main canal – Canal Drop with Notch Type – Regulators across the canal – Profile of Gravity Dam using AutoCAD – Design of Cross Drainage work: Syphon Aqueduct (Type III)

**CE 9353 DESIGN OF REINFORCED CEMENT CONCRETE AND
MASONRY STRUCTURES****L T P C
3 0 0 3****OBJECTIVE:**

To introduce the various philosophies of R.C. design and to study in detail the limit state design of structural elements such as beams, columns and footings

UNIT I DESIGN CONCEPTS AND ELASTIC DESIGN OF BEAMS 10

Concept of elastic method, ultimate load method and limit state method – Advantages of Limit State method over other methods – Limit State philosophy as detailed in current IS Code. Design of rectangular beam section by elastic method.

UNIT II LIMIT STATE DESIGN OF BEAMS 10

Design of singly and doubly reinforced rectangular and flanged beams – use of design aids for flexure – Behaviour of R.C. beams in shear and torsion – Shear and torsional reinforcement – Limit State design of R.C. members for combined bending, shear and torsion – Use of design aids. Design requirement for bond and anchorage as per IS code. Serviceability requirements.

UNIT III LIMIT STATE DESIGN OF SLABS 10

Behaviour of one way and two way slabs — design of one way simply supported, cantilever and continuous slabs. Design of two-way slabs for various edge conditions. Types of staircases - design of dog-legged staircase.

UNIT IV LIMIT STATE DESIGN OF COLUMNS AND FOOTING 10

Types of columns – design of short columns for axial load, combined axial load with uniaxial and biaxial bending - use of design aids. Design of footing for masonry and reinforced walls – design of axially and eccentrically loaded square and rectangular footings – design of combined rectangular footings for two columns only

UNIT V MASONRY MEMBERS 5

Design of masonry walls, pillars and footings as per NBC and IS Codes.

TOTAL: 45 PERIODS**TEXT BOOKS:**

CE 9354

WASTE WATER ENGINEERING

L T P C
3 0 0 3

OBJECTIVE:

Principles and design of Sewage Collection, Conveyance, treatment and disposal system will be covered. Relevant GIS codes and Government of India manual will be referred..

UNIT I PLANNING FOR SEWERAGE SYSTEMS 9

Sources of wastewater generation – Effects – Estimation of sanitary sewage flow – Estimation of storm runoff – Factors affecting Characteristics and composition of sewage and their significance – Effluent standards – Legislation requirements.

UNIT II SEWER NETWORK DESIGN 9

Sewerage – Hydraulics of flow in sewers – Objectives – Design period - Design of sanitary and storm sewers – Small bore systems - Computer applications – Laying, joining & testing of sewers – appurtenances – Pumps – selection of pumps and pipe Drainage -. Plumbing System for Buildings – One pipe and two-pipe systems.

UNIT III PRIMARY TREATMENT OF SEWAGE 9

Objective – Unit Operation and Processes – Selection of treatment processes – Onsite sanitation - Septic tank, Grey water harvesting – Primary treatment – Principles, functions design and drawing of screen, grit chambers and primary sedimentation tanks – Construction, Operation and Maintenance aspects.

UNIT IV SECONDARY TREATMENT OF SEWAGE 9

Objective – Selection of Treatment Methods – Principles, Functions, Design and Drawing of Units - Activated Sludge Process and Trickling filter, other treatment methods – Oxidation ditches, UASB – Waste Stabilization Ponds – Reclamation and Reuse of sewage - Recent Advances in Sewage Treatment – Construction and Operation & Maintenance aspects – Layout and Hydraulic profile of treatment plants.

UNIT V DISPOSAL OF SEWAGE AND SLUDGE 9

Standards for Disposal - Methods – dilution – Self purification of surface water bodies – Oxygen sag curve – Land disposal – Sewage farming – Deep well injection – Soil dispersion system. Sludge characterization – Thickening – Sludge digestion – Biogas recovery – Sludge Conditioning and Dewatering – disposal – Advances in Sludge Treatment and disposal.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Garg, S.K., Environmental Engineering Vol. II, Khanna Publishers, New Delhi, 2003.
2. Punmia, B.C., Jain, A.K., and Jain.A., Environmental Engineering, Vol.II, Lakshmi Publications, Newsletter, 2005.

CE 9355**FUNDAMENTALS OF REMOTE SENSING AND GIS****L T P C**
3 0 2 4**OBJECTIVE:**

To introduce the students to the basic concepts and principles of various components of remote sensing. To provide an exposure to GIS and its practical applications in civil engineering.

UNIT I EMR AND ITS INTERACTION WITH ATMOSPHERE & EARTH MATERIAL 9

Definition of remote sensing and its components – Electromagnetic spectrum – wavelength regions important to remote sensing – Wave theory, Particle theory, Stefan-Boltzman and Wein's Displacement Law – Atmospheric scattering, absorption – Atmospheric windows – spectral signature concepts – typical spectral reflective characteristics of water, vegetation and soil.

UNIT II PLATFORMS AND SENSORS 9

Types of platforms – orbit types, Sun-synchronous and Geosynchronous – Passive and Active sensors – resolution concept – Payload description of important Earth Resources and Meteorological satellites – Airborne and spaceborne TIR and microwave sensors.

UNIT III IMAGE INTERPRETATION AND ANALYSIS 9

Types of Data Products – types of image interpretation – basic elements of image interpretation - visual interpretation keys – Digital Image Processing – Pre-processing – image enhancement techniques – multispectral image classification – Supervised and unsupervised.

UNIT IV GEOGRAPHIC INFORMATION SYSTEM 9

Introduction – Maps – Definitions – Map projections – types of map projections – map analysis – GIS definition – basic components of GIS – standard GIS softwares – Data type – Spatial and non-spatial (attribute) data – measurement scales – Data Base Management Systems (DBMS).

UNIT V DATA ENTRY, STORAGE AND ANALYSIS 9

Data models – vector and raster data – data compression – data input by digitization and scanning – attribute data analysis – integrated data analysis – Modeling in GIS – Highway alignment studies – Land Information System.

CE 9356 COMPUTER AIDED STRUCTURAL ENGINEERING DRAWING L T P C
0 0 4 2

OBJECTIVES:

To develop the ability to design steel and concrete structural components and transfer the design into drawings as per IS Codes

1. Design and Drawing of R.C.C. cantilever and counter fort type retaining walls with reinforcement details.
2. Design and Detailing of R.C slab and R.C. Tee Beam Bridge deck and reinforcement details
3. Design of circular, rectangular and intz type water tank – Reinforcement details Design of R.C.C. circular and rectangular water tanks – ground – overhead - Reinforcement detail.
4. Design of plate girder – Twin girder deck type railway bridge – Through type and deck type Highway bridges – Truss girder bridges – Detailed drawing – riveted and welded connections. Basic Structural Steel Connection Details – Design of Plate Girder – Detailed Drawing – Design and Detailing of Steel Roof Truss.
5. Design of rectangular and hemispherical bottomed steel tank – Staging riveted joints - Detailed Drawing.
6. Demonstration using modern soft ware

SURVEY CAMP

L T P C
- - - 2

A Survey Camp for ten days during winter will be conducted to train the students to establish horizontal control by Triangulation.

CE 9359

TECHNICAL SEMINAR

L T P C
0 0 2 1

AIM:

To work on a specific technical topic in Civil Engineering and acquire the skill of written and oral presentation. To acquire writing abilities for seminars and conferences.

SYLLABUS:

The students will work for three hours per week guided by a group of staff members. They will be asked to talk on any topic of their choice and to engage in dialogue with the audience. A brief copy on their talk also should be submitted. Similarly, the students will have to present a seminar of not more than fifteen minutes on the technical topic. They should also answer the

queries on the topic. The students as the audience also should interact. Evaluation will be based on the general and technical presentation and the report and also on the interaction shown during the seminar.

CE 9401	PRINCIPLES OF MANAGEMENT	L T P C
		3 0 0 3

OBJECTIVE:

To introduce the basic concepts of management needed for a Civil Engineer

UNIT I BASIC CONCEPTS IN MANAGEMENT 9

Types of business operations -Sole proprietorship – Partnership – Company – Public and private sector enterprises / Joint ventures, collaborations.

Functions of Management -Principles of management – Functions of management – Functions of a manager.

Production Management -Planning – scheduling – procurement – Inventory control – management tools – L.P. – PERT, CPM, etc.

UNIT II INTRODUCTION TO MARKETING AND FINANCIAL MANAGEMENT 9

Market – Marketing, Segmentation, Positioning, Marketing Research, Market Planning, Scope of financial management – Cost accounting Vs Financial accounting, Appraisal of projects, Investment decisions – concept of pay back.

UNIT III MATERIALS AND EQUIPMENT MANAGEMENT 9

Planning – Identification, Procurement, Schedule and Cost control – systems approach in resource management – ABC analysis, VED analysis, FSN analysis, vendor rating evaluation, buying versus leasing of equipment

UNIT IV HUMAN RESOURCE MANAGEMENT 9

Scope and objectives of HRM – Man power policy and planning – Recruitment and selection – Training performance appraisal – Wage policy and compensation systems – Company union relationship and collective bargaining – Accidents – Absenteeism and turn over – Grievances / conflicts – Identification and resolution.

UNIT V INTRODUCTION TO COMPUTER APPLICATION (IN CONSTRUCTION MANAGEMENT) 9

Project identification-formulation-Preparation of detailed project report (DPR)-Planning – Scheduling and Resource analysis - Recording and operations- Project accounting, costing and finance – usage of project management software-

TOTAL: 45 PERIODS

CE 9402 STRUCTURAL DYNAMICS AND EARTHQUAKE ENGINEERING

L T P C
3 0 0 3

OBJECTIVE:

To provide a basic understanding of dynamic loading. Study the effect of earthquake loading on the behaviour of structures. Understand the codal provisions to design the structures as earthquake resistant.

UNIT I SINGLE DEGREE OF FREEDOM SYSTEMS 9

Formulation of equation of motion, Free and forced vibrations, Damping, Types of Damping-Damped and undamped vibrations, Response to dynamic loading.

UNIT II MODAL ANALYSIS 9

Free and forced vibration of undamped and damped MDOF systems. Equation of motions, Evaluation of natural frequencies and modes, Eigen Values and Eigen Vectors

UNIT III INTRODUCTION TO EARTHQUAKE ENGINEERING 9

Elements of Engineering Seismology, Characteristics of Earthquake Engineering, Earthquake History, Indian Seismicity.

UNIT IV BEHAVIOUR OF STRUCTURES AND SOIL 9

Performance of structures under past earthquakes, Lessons learnt from past earthquakes-soil liquefaction - Soil – Structure- Interaction (SSI) effects.

UNIT V EARTHQUAKE RESISTANT DESIGN 9

Concept of Earthquake Resistant Design, Provisions of Seismic Code IS 1893 (Part I), Response Spectrum, Design Spectrum, Design of Buildings, Reinforcement Detailing, Provisions of IS 13920.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Agarwal and Shrikhande,"Earthquake Resistant Design of Structures", Prentice Hall of India, 2007
2. Clough R.W, and Penzien J , Dynamics of Structures, Second Edition, Mc Graw – Hill International Edition, 1993

CE 9403

GROUND IMPROVEMENT TECHNIQUES

L T P C
3 0 0 3

OBJECTIVE:

At the end of the course student is expected to identify the problematic soil and suitable suggest remedial measures to improve their behaviour.

UNIT I PROBLEMATIC SOIL AND IMPROVEMENT TECHNIQUES 8

Role of ground improvement in foundation engineering – methods of ground improvement – Geotechnical problems in alluvial, lateritic and black cotton soils – Selection of suitable ground improvement techniques based on soil conditions.

UNIT II DEWATERING 10

Dewatering Techniques - Well points – Vacuum and electroosmotic methods – Seepage analysis for two – dimensional flow for fully and partially penetrated slots in homogeneous deposits (Simple cases only).

UNIT III INSITU TREATMENT OF COHESIONLESS AND COHESIVE SOILS 10

In-situ densification of cohesion-less soils and consolidation of cohesive soils: Dynamic compaction Vibroflotation, Sand compaction piles and deep compaction. Consolidation: Preloading with sand drains, and fabric drains, Stone columns and Lime piles-installation techniques only – relative merits of above methods and their limitations - stabilization of expansive soils.

UNIT IV EARTH REINFORCEMENT 9

Concept of reinforcement – Types of reinforcement material – Reinforced earth wall – Mechanism – simple design - applications of reinforced earth. Role of Geotextiles in filtration, drainage, separation and road works.

UNIT V GROUT TECHNIQUES 8

Types of grouts – Grouting equipments and machinery – injection methods – Grout monitoring – stabilization with cement, lime and chemicals.

TOTAL:45 PERIODS

TEXT BOOKS:

1. Purushothama Raj, P., Ground Improvement Techniques, Laxmi Publications (P) Ltd., New Delhi, 1999.
2. Koerner, R.M., Construction and Geotechnical Methods in Foundation Engineering, McGraw Hill, 1994.

CE 9404 ESTIMATING, COSTING AND VALUATION ENGINEERING L T P C
3 0 0 3

OBJECTIVE:

To offer knowledge in estimation, tender practices, contract procedures, and valuation. The student will be able to prepare estimates, call for tenders and execute works.

UNIT I QUANTITY ESTIMATION 9

Philosophy – Purpose – Methods of estimation – Types of estimates – Approximate estimates – Detailed estimate – Estimation of quantities for buildings, roads, canals and hydraulic structures using computer softwares.

UNIT II RATE ANALYSIS AND COSTING 9

Standard Data – Observed Data – Schedule of rates – Market rates – Assessment of Man Hours and Machineries for common civil works – Rate Analysis – Cost Estimates using Computer softwares

UNIT III SPECIFICATIONS AND TENDERS 9

Specifications – Detailed and general specifications – Constructions – Sources – Types of specifications – TTT Act 2000 – Tender notices – types – tender procedures – Drafting model tenders , E-tendering-Digital signature certificates- Encrypting -Decrypting – Reverse auctions.

UNIT IV CONTRACTS 9

Contract – Types of contracts – Formation of contract – Contract conditions – Contract for labour, material, design, construction – Drafting of contract documents based on IBRD / MORTH Standard bidding documents – Construction contracts – Contract problems – Arbitration and legal requirements.

UNIT V VALUATION 9

Definitions – Various types of valuations – Valuation methods – Valuation of land – Buildings – Valuation of plant and machineries.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. B.S.Patil, 'Civil Engineering Contracts and Estimates', University Press, 2006.
2. D.N. Banerjee, 'Principles and Practices of Valuation', V Edition, Estern Law House, 1998.

CE 9405**RAILWAYS AND AIRPORTS ENGINEERING****L T P C
3 0 0 3****OBJECTIVE:**

To introduce the students about the various types of transport like Railways and airways, planning and design principles of construction of railway track and airport terminals will be covered with an exposure on standards

UNIT I RAILWAY PLANNING AND CONSTRUCTION 9

Route alignment surveys, modern methods – Elements of permanent way – Rails, sleepers, ballast, rail fixtures and fastenings, coning of wheels, creep in rails, defects in rails – Geometric design of railway track, gradient, super elevation, widening of gauge on curves

UNIT II RAILWAY STATION YARDS AND OPERATIONS 9

Planning and development of railway station yards, –Turnouts, points and crossings – Signalling - Interlocking, track circuiting – Modern developments in railways, urban railways, underground and tube railways–Basic planning for MRTS and Suburban railways–Electric traction

UNIT III RAILWAY CONSTRUCTION AND MAINTENANCE 9

Earthwork – Stabilization of track on poor soil- Tunneling - Methods, drainage and ventilation – Construction and maintenance of tracks – uniguage – Maintenance of rolling stocks and signals

UNIT IV AIRPORT PLANNING 9

Airport site selection – Components of airports- Forecasting in aviation- Airport obstructions – Zoning laws - Regional planning - Airport architecture - Airport lighting - Air traffic control aids

UNIT V AIRPORT DESIGN 9

Runway orientation – Basic runway length – Corrections to basic runway length – geometric design of runways – Layout of taxiway and terminal area- airport pavement design (flexible pavement only).

6. Agarwal.M.M., Indian Railway Track, New Delhi

CE 9406**ARCHITECTURE AND TOWN PLANNING****L T P C
3 0 0 3****OBJECTIVE:**

To provide the basic knowledge on the principles of design of buildings relating to the environment and climate.

UNIT I ARCHITECTURAL DESIGN 8

Architectural Design – an analysis – integration of function and aesthetics – Introduction to basic elements and principles of design.

UNIT II SITE PLANNING 9

Surveys – Site analysis – Development Control – Layout regulations- Layout design concepts.

UNIT III BUILDING TYPES 12

Residential, institutional, commercial and Industrial – Application of anthropometry and space standards-Inter relationships of functions – Safety standards – Building rules and regulations – Integration of building services – Interior design.

UNIT IV CLIMATE AND ENVIRONMENTAL RESPONSIVE DESIGN 8

Man and environment interaction- Factors that determine climate – Characteristics of climate types – Design for various climate types – Passive and active energy controls – Green building concept

UNIT V TOWN PLANNING 8

Planning – Definition, concepts and processes- Urban planning standards and zoning regulations- Urban renewal – Conservation – Principles of Landscape design

TOTAL: 45 PERIODS**REFERENCES:**

CE 9407

PRACTICAL TRAINING

L T P C
0 0 0 2

OBJECTIVE:

To train the students in field work so as to have a first hand knowledge of practical problems in carrying out engineering tasks. To develop skills in facing and solving the field problems.

SYLLABUS:

The students individually undertake training in reputed civil engineering companies for the specified duration. At the end of the training, a report on the work done will be prepared and presented. The students will be evaluated through a viva-voce examination by a team of internal staff.

CE 9451

PROJECT WORK

L T P C
0 0 12 6

OBJECTIVE:

To develop the ability to solve a specific problem right from its identification and literature review till the successful solution of the same. To train the students in preparing project reports and to face reviews and viva voce examination.

SYLLABUS:

The student works on a topic approved by the head of the department under the guidance of a faculty member and prepares a comprehensive project report after completing the work to the satisfaction of the supervisor. The student will be evaluated based on the report and the viva voce examination by a team of examiners including one external examiner.

CE 9021

BRIDGE STRUCTURES

L T P C
3 0 0 3

OBJECTIVE:

To impart exposure on various aspects of structural design of common types of steel and concrete bridges.

UNIT I HIGHWAY STEEL BRIDGES

8

Design of through type steel highway bridges for IRC loading – Design of stringers, cross girders and main girders – Design of deck type steel highway bridges for IRC loading – Design of main girders – Design of pratt type truss girder highway bridges – Design of top chord, bottom chord, web members – Effect of repeated loading.

UNIT II RAILWAY STEEL BRIDGES

7

Design of plate girder railway bridges for railway loading – Wind effects – Design of web and flange plates – Vertical and horizontal stiffeners – Web and flange splicing.

UNIT III REINFORCED CONCRETE BRIDGES 15

Types of Bridges - Design of solid slab bridges for IRC loading - Design of kerb – Design of tee beam bridges – Design of panel and cantilever for IRC loading – Design of tee beams - Courbon's theory – Pigeaud's curves – Design of balanced cantilever bridges – Deck slab – Main girder – Design of cantilever – Design of articulation

UNIT IV AQUEDUCTS AND BOX CULVERTS 6

Design of Aqueducts and Syphon Aqueducts – Design of Box Culverts.

UNIT V PRESTRESSED CONCRETE BRIDGES 9

Design of prestressed concrete bridges – Preliminary dimensions – Flexural and torsional parameters – Courbon's theory – Distribution coefficient by exact analysis – Design of girder section – Maximum and minimum prestressing forces – Eccentricity – Live load and dead load shear forces – Cable zone in girder – Check for stresses at various sections – Check for diagonal tension – Diaphragms – End block – Short term and long term deflections.

TOTAL: 45 PERIODS

CE 9022

PREFABRICATED STRUCTURES

**L T P C
3 0 0 3**

OBJECTIVE:

To learn the design prefabricated structures

UNIT I INTRODUCTION 10

Need for prefabrication - Principles - Materials - Modular co-ordination – Standardization – Systems Production – Transportation – Erection.

UNIT II PREFABRICATED COMPONENTS 10

Behaviour of structural components – Large panel constructions – Construction of roof and floor slabs Wall panels – Columns – Shear walls.

UNIT III DESIGN PRINCIPLES 10

Disuniting of structures – Design of cross section based on efficiency of material used - Problems in design because of joint flexibility – Allowance for joint deformation.

UNIT IV JOINTS IN STRUCTURAL MEMBERS**8**

Joints for different structural connections – Dimensions and detailing – Design of expansion joints- Jointing Materials.

UNIT V DESIGN FOR ABNORMAL LOADS**7**

Progressive collapse – Codal provisions – Equivalent design loads for considering abnormal effects such as earthquakes, cyclones etc., - Importance of avoidance of progressive collapse.

TOTAL: 45 PERIODS**TEXT BOOKS:**

1. Gerostiza C.Z., Hendrikson C. and Rehat D.R., Knowledge Based Process Planning for Construction and Manufacturing, Academic Press Inc., 1989

CE 9023**COMPUTER AIDED DESIGN OF STRUCTURES****L T P C
3 0 0 3****OBJECTIVE:**

The overall idea of implementing a computer aided design with advantages and demerits. The software techniques in finite element analysis and the applications and optimize the structural components.

UNIT I INTRODUCTION**9**

Fundamentals of CAD - Software requirements – Hardware components in CAD system – Design process - Applications and benefits.

UNIT II COMPUTER GRAPHICS**9**

Graphic Software – Graphic primitives - Transformations - 2 Dimensional and 3Dimensional transformations – Concatenation - Wire frame modeling and solid modeling - Graphic standards - Drafting packages – Auto CAD.

UNIT III STRUCTURAL ANALYSIS**9**

Fundamentals of finite element analysis - Concepts of finite elements - Principles of structural analysis – Stiffness matrix formulation – Variational Method – Weighted residual method – Problems – Conditions of convergence of functions – Analysis packages and applications.

UNIT IV DESIGN AND OPTIMIZATION 9
Principles of design of steel and RC structures - Beams and Columns - Applications to simple design problems - Optimization techniques - Algorithms - Linear programming.

UNIT V EXPERT SYSTEMS 9
Introduction to artificial intelligence - Knowledge based expert systems – Rules and decision tables - Inference mechanisms - simple applications

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Groover M.P. and Zimmers E.W.Jr., “CAD / CAM, Computer Aided Design and Manufacturing”, Prentice Hall of India Ltd, New Delhi, 1984.
2. Krishnamoorthy C.S. Rajeev, S. “Computer Aided Design”, Narosa Publishing House, New Delhi, 1990.

CE 9024 MAINTENANCE AND REHABILITATION OF STRUCTURES L T P C
3 0 0 3

OBJECTIVE:

To get the knowledge on quality of concrete, durability aspects, causes of deterioration, assessment of distressed structures, repairing of structures and demolition procedures.

UNIT I MAINTENANCE AND REPAIR STRATEGIES 8
Maintenance, repair and rehabilitation, Facets of Maintenance, importance of Maintenance various aspects of Inspection, Assessment procedure for evaluating a damaged structure, causes of deterioration.

UNIT II SERVICEABILITY AND DURABILITY OF CONCRETE 12
Quality assurance for concrete construction concrete properties- strength, permeability, thermal properties and cracking. - Effects due to climate, temperature, chemicals, corrosion - design and construction errors - Effects of cover thickness and cracking

UNIT III MATERIALS AND TECHNIQUES FOR REPAIR 15
Special concretes and mortar, concrete chemicals, special elements for accelerated strength gain, Expansive cement, polymer concrete, sulphur infiltrated concrete, ferro cement, Fibre reinforced concrete. Rust eliminators and polymers coating for rebars during repair, foamed concrete, mortar and dry pack, vacuum concrete, Guniting and Shotcrete, Epoxy injection, Mortar repair for cracks, shoring and underpinning. Methods of corrosion protection, corrosion inhibitors, corrosion resistant steels, coatings and cathodic protection.

UNIT IV REPAIRS, REHABILITATION AND RETROFITTING OF STRUCTURES 6
Repairs to overcome low member strength, Deflection, Cracking, Chemical disruption, weathering corrosion, wear, fire, leakage and marine exposure.

UNIT V DEMOLITION TECHNIQUES 4
Engineered demolition techniques for dilapidated structures - case studies

TOTAL: 45 PERIODS

3. Raikar, R.N., Learning from failures - Deficiencies in Design, Construction and Service - R&D Centre (SDCPL), Raikar Bhavan, Bombay, 1987.
4. N.Palaniappan, Estate Management, Anna Institute of Management, Chennai, 1992
5. Lakshmipathy, M. Senthil.R, Lecture Notes of "Workshop on Repairs and Rehabilitation of Structures", October 1999.

OBJECTIVE:

To learn the design of water tank and other storage elements.

UNIT I	STEEL WATER TANKS	15
Design of rectangular riveted steel water tank – Tee covers – Plates – Stays – Longitudinal and transverse beams – Design of Staging – Base plates – Foundation and anchor bolts – Design of pressed steel water tank – Design of stays – Joints – Design of hemispherical bottom water tank – Side plates – Bottom plates – Joints – Ring girder – Design of staging.		
UNIT II	CONCRETE WATER TANKS	15
Design of circular tanks – Hinged and Fixed at the base IS method of calculating shear forces and moments – Hoop tension – Design of intze tank – Dome – Ring girders – Conical dome – Staging – Bracings – Design of rectangular tanks – Approximate method and IS methods – Design of under ground tanks – Design of base slab and side wall – Check for uplift.		
UNIT III	STEEL BUNKERS AND SILOS	5
Design of Square bunker – Jansen’s and Airy’s theories – IS codal provisions – Design of side plates – Stiffeners – Hopper – Longitudinal beams – Design of cylindrical silo – Side plates – Ring girder – Stiffeners.		
UNIT IV	CONCRETE BUNKERS AND SILOS	5
Design of square bunker – Side walls – Hopper bottom – Top and bottom edge beams – Design of Cylindrical silo wall portion – Design of conical hopper – Ring beam at junction.		
UNIT V	FOUNDATION	5
Design of various types of foundation like isolated, combined and raft foundation for a Water tanks, Bunkers and Silo’s.		

TOTAL: 45 PERIODS

CE 9026 DESIGN OF PLATE AND SHELL STRUCTURES L T P C
3 0 0 3

OBJECTIVE:

To learn the design of plate and shell structures

UNIT I THIN PLATES WITH SMALL DEFLECTION 10

Laterally loaded thin plates - Governing differential equation, various boundary conditions.

UNIT III RECTANGULAR PLATES 10

Simply supported rectangular plates - Navier solution and Levy's method – Loading.

UNIT III THIN SHELLS 5

Classification of shells - Types of shells - Structural action.

UNIT IV ANALYSIS OF SHELLS 10

Shells of revolution – Spherical dome, Conical shell and ellipsoid of revolution – Shells of translation – Cylindrical shell and Hyperbolic paraboloid.

UNIT V DESIGN OF SHELLS 10

Spherical dome, Conical shell and cylindrical shell.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Szilard, R., Theory and Analysis of Plates, Prentice Hall Inc., 1995
2. Timoshenko, S. and Krieger S.W., Theory of Plates and Shells, McGraw Hill, 1990.
3. Ramasamy, G.S., Design and Construction of Concrete Shells Roofs, CBS Publishers and Distributors, New Delhi, 1996.

CE 9027 PRESTRESSED CONCRETE STRUCTURES L T P C
3 0 0 3

OBJECTIVE:

To understand the behaviour and performance of prestressed concrete structures. Compare the behaviour of prestressed concrete members with that of the normal reinforced concrete structures. Understand the performance of composite members. Finally to learn the design of prestressed concrete structures.

UNIT I FUNDAMENTAL PRINCIPLES 9

Basic concepts – Advantages – Materials required – Systems and methods of prestressing – Analysis of sections – Stress concept – Strength concept – Load balancing concept – Effect of loading on the tensile stresses in tendons

UNIT II BEHAVIOUR 9
Losses of prestress – factors affecting the losses of prestress. Deflections of prestressed concrete members - Factors influencing deflections –Effect on tendon profile on deflections. Short term and long term – deflections

UNIT III DESIGN 9
Flexural strength – Simplified procedures as per codes – strain compatibility method – Basic concepts in selection of cross section for bending – stress distribution in end block, Design of anchorage zone reinforcement – Limit state design criteria – Partial prestressing – Applications.

UNIT IV COMPOSITE CONSTRUCTION 9
Analysis for stresses – Estimation of deflections – Flexural and shear strength of composite members – Differential Shrinkage – Shrinkage induced stresses.

UNIT V SPECIAL STRUCTURES 9
Prestressed concrete tanks, poles, sleepers. Prestressed concrete bridges - General aspects – pretensioned prestressed bridge decks – Post tensioned prestressed bridge decks – Advantages over R.C. bridges – Principles of design only

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Krishna Raju N., Prestressed concrete, Tata McGraw Hill Company, New Delhi, 1998.
2. N Rajagopal, Prestressed concrete, Second Edition, Narosa Publications, New Delhi, 2007.

REFERENCES:

1. Mallic S.K. and Gupta A.P., Prestressed concrete, Oxford and IBH publishing Co.Pvt. Ltd. 1997.

3. Lin T.Y., Design of prestressed concrete structures, Asia Publishing House, Bombay 1995.
4. David A.Sheppard, William R. and Philips, Plant Cast precast and prestressed concrete – A design guide, McGraw Hill, New Delhi, 1992.

OBJECTIVE:

To learn the layout design and functional aspects and designing the various industrial elements.

UNIT I PLANNING 9

Classification of industries and industrial structures – General requirements of various industries – Planning and layout of buildings and components.

UNIT II FUNCTIONAL REQUIREMENTS 9

Lighting – Ventilation Lighting – Illumination levels – Characteristics of Good lighting – Principles of day lighting design – Artificial lighting – Ventilation – Natural and Mechanical Ventilation – Evaporate cooling design – Measurement – Contaminant control – Installation and Operation - Acoustics – Fire safety – Guidelines from factories act.

UNIT III DESIGN OF STEEL STRUCTURES 9

Industrial roofs – Crane girders – Mills buildings – Chimney.

UNIT IV DESIGN OF R.C. STRUCTURES 9

Silos and bunkers – Principles of Design of Chimney.

UNIT V PREFABRICATION 9

Principles of prefabrication – Pretressed precast roof trusses

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Henn W., Buildings for industry, Vols. I and II, London Hill Books, 1965.
2. "Course Notes on Modern Developments in the Design and Construction of Industrial Structures", Structural Engineering Research Centre, Madras, 1982.

REFERENCES:

4. N.Krishnaraju, "Advanced Reinforced Concrete Design,CBS Publishers and Distributors, New Delhi, 1986.
5. Ramchandra, "Design of Steel Structures', Vol.2, Standard Book House, Delhi, 1984.

OBJECTIVE:

To provide an insight to the design of tall buildings. To enlighten the students on modern techniques available for the analysis of tall buildings.

UNIT I DESIGN CRITERIA 8

Design Philosophy, Materials – Modern concepts – High Performance Concrete, Fibre Reinforced Concrete, Light weight concrete, Self Compacting Concrete.

UNIT II LOADING 9

Gravity Loading – Dead load, Live load, Impact load, Construction load, Sequential loading. Wind Loading – Static and Dynamic Approach, Analytical method, Wind Tunnel Experimental methods. Earthquake Loading – Equivalent lateral Load analysis, Response Spectrum Method, Combination of Loads,

UNIT III BEHAVIOUR OF STRUCTURAL SYSTEMS 9

Factors affecting the growth, height and structural form, Behaviour of Braced frames, Rigid Frames, in filled frames, Shear walls, Coupled Shear walls, Wall – Frames, Tubular, Outrigger braced, Hybrid systems.

UNIT IV ANALYSIS 10

Modeling for approximate analysis, Accurate analysis and reduction techniques, Analysis of structures as an integral unit, Analysis for member forces, drift and twist. Computerized 3D analysis, Evaluation of frequency of vibration of structures

UNIT V DESIGN OF TALL BUILDINGS 9

Design for differential movement, Creep and Shrinkage effects, Temperature Effects and Fire Resistance.

TOTAL: 45 PERIODS**TEXT BOOKS:**

1. Bryan Stafford Smith and Alex Coull, " Tall Building Structures ", Analysis and Design, John Wiley and Sons, Inc., 1991.
2. Taranath B.S, "Structural Analysis and Design of Tall Buildings", McGraw Hill, 1988

3. Lynn S.Beedle, Advances in Tall Buildings, CBS Publishers and Distributors, Delhi, 1996.
4. Wolfgang Schuler, "High Rise Building Structures", John Wiley & Sons, New York, 1976.

OBJECTIVE:

The course introduces to the undergraduate students, the phenomena, governing equations and the engineering problems associated with wind flow around various structures.

UNIT I INTRODUCTION TO WIND ENGINEERING 9

Continuity and Navier-Stokes equations, atmospheric pressure and gradient wind, peak and hourly mean wind speeds, wind energy and turbulence, spectral distribution and boundary layer.

UNIT II AERODYNAMICS OF WIND LOADING 9

Bluff bodies aerodynamics, ideal flow, separation, wake, vortex shedding flow past circular and rectangular objects, Buffeting and ovalling, Galloping and flutter

UNIT III MODELLING AND ANALYSIS 9

Wind tunnel studies, types of wind tunnels, Modeling requirements, pressure, velocity, turbulence and force measurements and related instrumentation, Wall effects, similarity laws, Aero-elastic models

UNIT IV WIND ON STRUCTURES 9

Chimneys, tall buildings, towers and bridges, Rigid and flexible structures, Analytical procedures for along wind and across wind forces.

UNIT V DESIGN OF STRUCTURES UNDER WIND LOADING 9

Applications to design, codal provisions, Design wind velocities, Wind resistant design by Indian Codes and other International Codes of Practice, Case studies .

TOTAL: 45 PERIODS**TEXT BOOK:**

1. Cook,N.J., The Designer's Guide to Wind Loading of Building Structures, Butter worths, 1989.

REFERENCES:

1. Peter Sachs, Wind Forces in Engineering, Pergamon Press, New York, 1972.
2. Lawson,T.V., Wind Effects on Buildings, Vols. 1 & 2, Applied Science Publishers, London, 1980
3. Simiu.E., and Scanlan,R.H., Wind Effects on Structures: An Introduction to Wind Engineering, John Wiley & Sons
4. Taranath,B.S., Structural Analysis and Design of Tall Buildings, McGraw Hill, 1988.

OBJECTIVE:

The course is designed to give an insight into the latest developments regarding smart materials and their use in structures. This also deals with structures which can self adjust their stiffness with load.

UNIT I PROPERTIES OF MATERIALS 9

Piezoelectric Materials , Piezoelectric properties, Actuation of structural components, Shape Memory Alloys, Constitutive modeling of the shape memory effect, vibration control, Embedded actuators, Applications of shape memory alloys.

UNIT II ER AND MR FLUIDS 9

Electrorheological and magnetorheological fluids, Mechanisms and Properties, Applications of ER and MR fluids, Fiber Optics, Fiber characteristics, Fiber optic strain sensors, Applications of optical fibers

UNIT III VIBRATION ABSORBERS 9

Parallel damped vibration absorber, Gyroscopic vibration absorber, Active vibration, absorber, Applications, Vibration Characteristics of mistuned systems, Analytical approach

UNIT IV CONTROL OF STRUCTURES 9

Control modeling of structures, Control strategies and limitations, classification of control systems, Classical control, Modern control, Optimal control and Digital control, Active structures in practice.

UNIT V BIOMIMETICS 9

Characteristics of natural structures, Biomimetic structural design, Biomimetic sensing, Challenges and opportunities for Biomimetics, Chemical and biochemical sensing in structural assessment, Absorptive chemical sensors, Spectroscopes

Total: 45 PERIODS**TEXT BOOK:**

1. Srinivasan,A.V., and Michael McFarland.D., Smart Structures – Analysis and Design, Cambridge University Press, 2001.

REFERENCES:

1. Brian Culshaw, Smart Structures and Materials , Artech House, Boston, 1996
2. M.V.Gandhi and B.S.thompson, Smart Materials and Structures , Chapman and Hall 1992
3. Mel. M Schwartz, Encyclopedia of Smart Materials, , John Wiley and Sons inc. 2002

OBJECTIVE:

The course is designed to provide an insight into the Finite Element Techniques for modeling and analysis of structural systems.

UNIT I INTRODUCTION 9

Modelling- Continuum and Discrete Domains – Boundary value problem – Approximate Solutions – Variational and Weighted Residual Formulations – Ritz formulation – Introduction to finite domains and finite elements.

UNIT II ONE DIMENSIONAL PROBLEMS 9

Generalised Coordinates- Interpolation and shape functions – Bar and Truss elements- Equation formulation – Assembly – Introduction of Boundary Conditions – Penalty function approach – Identification with matrix methods.

UNIT III TWO DIMENSIONAL AND BEAM ELEMENTS 9

Minimum Potential Energy Theorems – Principle of virtual work – Generalised finite element formulation – Beam element – Two dimensional elements – Triangular and Rectangular elements – Axisymmetric elements – Higher order elements.

UNIT IV ISO PARAMETRIC FORMULATION AND NUMERICAL INTEGRATION 9

Concept of Isoparametric elements – Working with shape functions – Numerical integration in one and two dimensions.

UNIT V APPLICATIONS 9

Plane stress and plane strain problems – heat transfer problems – Solution techniques, Standard packages and their features.

6. Madhujit Mukhopadhyay and Abdul Hammed Sheik, "Matrix and finite element Analysis of Structures", Area Books, 2004

OBJECTIVES:

- To introduce the student to the concept of hydraulic, hydrology and ground water models in management of Water Resources.
- At the completion of the course the students should be able to understand and build the mathematical models for various problems in water resources management.

UNIT I MATHEMATICAL MODELLING 6

Role of models in water resources engineering – basic concept of model study- Planning model - operational model- elements on hydraulic models- Elements of hydrologic models

UNIT II HYDRAULIC MODELS 7

Over land flow- time of concentration- isochrone- time area diagram- hydraulic routing- kinematics wave model –HEC Models- case studies

UNIT III HYDROLOGIC MODELS 10

Stream network model- basic concepts of basin simulation- single and multipurpose reservoir operation model (MITSIM) - Storm water management model

UNIT IV OPTIMIZATION MODELS 10

Basics of optimization – objective of model- linear decision rule with applications – concepts of probability and transitional probability- optimization through Genetic algorithm- Fuzzy logic concepts- case studies

UNIT V GROUND WATER MODELS 12

Analytical-Analog models- model of a aquifer- finite difference approximation- Introduction to Finite element technique to solve Ground water flow equation- contaminant transport model using Visual Modflow software.

TOTAL: 45 PERIODS**TEXT BOOKS:**

CE 9037

PARTICIPATORY WATER MANAGEMENT

L T P C
3 0 0 3

OBJECTIVES:

- To introduce the student the concept of Peoples involvement in water management.
- At the completion of the course the students should be able to understand the value of Participatory approach for better performance of the completed systems and other facilities through their organized associations.

UNIT I FUNDAMENTALS OF SOCIOLOGY 6

Sociology – Basic concept – Perspectives of sociology – social system – Sociological Understanding.

UNIT II CONCEPT OF PARTICIPATION 10

Participatory approach – Necessity – Objectives of participation – Kinds of participation – Resource mobilization – Sustained system performance – Conflict management – Context of participation, factors in the environment.

UNIT III ORGANIZATIONAL DESIGN 9

Membership and decision making – Leadership and responsibilities – Development strategy – Channels for implementation – Improving agency relations – Technical co-operation – Special roles.

UNIT IV PARTICIPATION IN WATER MANAGEMENT 10

Cost of participation – Benefits of participation – Multiple use of water – Participation in domestic, irrigation, industrial sectors – User roles in participatory management – Participation of women – Incentives for participation.

UNIT V FARMER ORGANIZATION AND PARTICIPATION 10

Water user association – Activities in irrigation management – User roles in irrigation management – Irrigation groups – Supporting farmer organization and participation – Experimentation, phasing and flexibility - Bureaucratic reorientation - Irrigation management transfer.

TOTAL: 45 PERIODS

TEXT BOOKS:

OBJECTIVES:

- To introduce the student to the concept of dynamic process of a watershed resulting in soil erosion.
- At the completion of the course the students should be able to understand the appropriate Conservation measures to be adopted for remediation of watershed.

UNIT I WATERSHED 6

Watershed – concept – classification – characteristics- History of erosion – Erosion problems of India – Approaches to soil and water conservation.

UNIT II SOIL CONSERVATION 12

Soil erosion – Types of soil erosion – Controlling soil erosion – Soil erosion by wind and water – soil conservation practices – vegetative practices – mechanical practices – erosion control in torrents and gullies – soil loss estimation models.

UNIT III WATER CONSERVATION 9

Need for water conservation – water conservation measures – water harvesting – principle and techniques – flood water harvesting.

UNIT IV WATERSHED MANAGEMENT 9

Watershed programmes – factors affecting watershed management – planning of watershed works – watershed water resources – watershed management practices.

UNIT V MANAGEMENT PRACTICES 9

Joint forest management – Grass land farming and management – Range and pastures – Grazing practices – Wasteland development.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. R. Suresh, Soil and Water Conservation Engineering, Standard Publishers distributors, New Delhi, 2000.
2. Ghanshyam Das, Hydrology and Soil conservation Engineering, Prentice-Hall India, New Delhi, 2000.

OBJECTIVE:

To give an overview of Traffic engineering - Various surveys to be conducted, traffic regulation, management and traffic safety.

UNIT I TRAFFIC CHARACTERISTICS 10

Road Characteristics – Classification – Functions and standards – Road user characteristics – PIEV theory – Vehicle – Performance characteristics – Fundamentals of Traffic Flow – Urban Traffic problems in India

UNIT II TRAFFIC SURVEYS 7

Traffic Surveys – Speed, journey time and delay surveys – Vehicle Volume Survey – Methods and interpretation – Origin Destination Survey – Methods and presentation – Parking Survey – Methods, interpretation and presentation – Statistical applications in traffic studies and traffic forecasting – level of service – Concept, application and significance.

UNIT III TRAFFIC ENGINEERING REGULATION AND CONTROL 8

Capacity of Rotary intersection and Design – Capacity of signalized intersections – Traffic signals, warrants, type – Design and coordination – Traffic regulation principles and enforcement – Traffic controls, traffic signals and markings and enforcement.

UNIT IV TRAFFIC SAFETY AND ENVIRONMENT 10

Road accidents – Causes, effect, prevention, and cost – street lighting – Traffic and environment hazards – Air and Noise Pollution, causes, health effects and abatement measures.

UNIT V TRAFFIC MANGEMENT 10

Area Traffic Management System – One way street system, exclusive traffic lanes, tidal flow operation, staggering of work hours and road pricing – Non road pricing options _ Parking charges, Public transport, Subsidies, Vehicle License fees, Road Building, Permit system, Physical Traffic Management Transport System Management (TSM) and Transport Demand Management (TDM) .

5. Jason C.Yu Transportation Engineering, Introduction to Planning, Design and Operations , Elsevier, 1992.

OBJECTIVES:

To introduce the various components in Docks and Harbour. The planning and design principles of various components in Docks and harbours will be covered

UNIT I WIND, TIDES AND CURRENTS 9

Wind characteristics – Tide producing forces – Tidal theories – Types of ocean currents – Littoral drift – Coastal erosion and protection works.

UNIT II PLANNING OF PORT AND HARBOURS 9

Elements of harbours – Types of harbours – Size and shape of harbours – Planning of harbours and ports – Choice of site – Estimating the traffic – Turning basin, approach channel, entrance channel – Site investigation.

UNIT III BREAK WATERS AND DREDGING 9

Types of break waters and factors determining their selection – Location, arrangement, design and construction of various types of break waters – Dredging – Objectives, types and equipments.

UNIT IV PORT FACILITIES 9

General aspects of selection and design – Piers, wharves, quay walls, jetties, dolphins, trestle, moles, fenders and moorings, lock and lock gates – Dry and wet docks – Transit sheds and ware houses.

UNIT V COASTAL SHIPPING 9

Coastal shipping – Inland navigation – Container transportation – Environmental concerns in port construction – Coastal regulation zones – Navigational aids.

3. R.Srinivasan, Harbour, Dock and Tunnel Engineering, Charotar Book stall, Anand, India.

OBJECTIVE:

The objective of this course is to create an awareness / overview of the Impact of Transportation Projects on the Environment and Society.

UNIT I INTRODUCTION**8**

Environmental Inventory, Environmental Assessment, Environmental Impact Assessment (EIA), Environmental Impact of Transportation Projects, Need for EIA, EIA Guidelines for Transportation Project, Historical Development

UNIT II METHODOLOGIES**8**

Elements of EIA – Screening and Scoping – Methods of Impact Analysis – Applications – Appropriate Methodology

UNIT III ENVIRONMENTAL IMPACT, PREDICTION AND ASSESSMENT**10**

Prediction and Assessment of Impact of Transportation Project at various stages on water, air, noise, land, acquisition and resettlement, Socio-economic impact, indigenous people, aesthetics, health and safety, energy studies, IRC guidelines.

UNIT IV ENVIRONMENTAL MITIGATION AND MANAGEMENT PLAN**10**

Mitigation of the impact on natural and man-made Environment, health, water, land, noise, air, public participation, Environmental Management Plan, Energy Conservation, Methods to reduce global warming

UNIT V EIA CASE STUDIES**9**

EIA Case Studies on Highway, Railway, Airways and Waterways Projects

TOTAL: 45 PERIODS**TEXT BOOKS:**

4. Priya Ranjan Trivedi; International Encyclopedia of Ecology and Environment – EIA, Indian Institute of Ecology and Environment, New Delhi, 1998

OBJECTIVE:

To introduce the concepts of design, evaluation and performance of existing and new flexible and rigid pavements with due emphasis on systems approach and performance prediction models.

UNIT I PAVEMENT MANAGEMENT PROCESS 9

Historical background – General nature and applicability of systems methodology – Basic components of Pavement Management System – Planning pavement investments

UNIT II EVALUATION AND PERFORMANCE 9

General concepts –Economic and functional evaluation – Evaluation of pavement performance –Evaluation of structural capacity - Pavement distresses - Condition surveys – Safety evaluation

UNIT III DESIGN STRATEGIES 12

Framework for pavement design – Design objectives and constraints – Basic structural response models – Characterization of physical design inputs – generating alternative pavement design – Economic evaluation of alternative design – Analysis of alternative design strategies – Selection of optimal design strategy

UNIT IV PERFORMANCE PREDICTION MODELS 6

Techniques for developing prediction models – AASHTO, CRRl and HDM models- Computer applications

UNIT V REHABILITATION 9

Repair of pavement defects – Maintenance of flexible and rigid pavements- Bituminous and cement concrete overlays – System analysis

**COMPUTER APPLICATIONS IN HIGHWAY AND
TRANSPORTATION ENGINEERING**

**L T P C
3 0 0 3**

OBJECTIVES:

To provide knowledge on Computer Applications related to Highway and Transportation Engineering

UNIT I CAD APPLICATIONS IN HIGHWAY ENGINEERING 9

Writing Programs for Drawing Graphics Elements like Point, Line. Preparation of Cad Drawing for Highway Elements and Transportation Infrastructure.

UNIT II GIS APPLICATIONS IN TRANSPORTATION PLANNING 9

Road Net Work mapping – Spatial Data preparation Attribute Data input – GIS –Theory and Application – Practical exercise.

UNIT III COMPUTER AIDED HIGHWAY DESIGN 9

Design of Highway Geometric Elements – Carriageway, shoulders, cross slope etc., Highway Alignment – Practical exercise

UNIT IV PAVEMENTS MANAGEMENT SYSTEM 9

Pavement Surface condition Evaluation methods - Pavement Management System – Practical exercise

**UNIT V COMPUTER APPLICATIONS IN TRAFFIC ENGINEERING AND
TRANSPORT PLANNING 9**

Signal Design and Signal Coordination – Net work Analysis, Theory, Practice and Case studies

TOTAL: 45 PERIODS

CE 9045

ADVANCED HIGHWAY ENGINEERING

**L T P C
3 0 0 3**

OBJECTIVE:

To give exposure to the advanced topics in the area of Highway Engineering.

UNIT I MATERIALS 9

Properties and tests on modified bitumen and bitumen emulsion – IS requirements – advantages Geo synthetics. Types and selection of cement for Pavement Quality Concrete (PQC) – Use of admixtures and fibers in PQC

UNIT II	MIX DESIGN	9
Marshall method of mix design for dense bituminous mixes – Super pave concepts – IRC guidelines and SHRP recommendations - Principles of concrete mix design for pavements – IRC method –recommendations.		
UNIT III	ANALYSIS AND DESIGN OF RIGID PAVEMENTS	9
Stresses and deflections in rigid pavements – Design of plain jointed and continuously reinforced cement concrete pavements using IRC method		
UNIT IV	ANALYSIS AND DESIGN OF FLEXIBLE PAVEMENTS	9
Stresses and deflection in flexible pavements – Design of flexible pavements using IRC method KENLAYER applications.		
UNIT V	MAINTENANCE	9
Factors affecting the performance of flexible and rigid pavements – Performance indicators and evaluation – Use of performance prediction models in maintenance – Recent techniques for repairing pavement defects – Maintenance management system – MOSRTH (India) recommendations.		

TOTAL = 45 PERIODS

CE 9046	ENVIRONMENTAL IMPACT ASSESSMENT	L T P C
		3 0 0 3

OBJECTIVE:

Students should be conversant with assessment of environmental impacts due to major infrastructure projects and their management

UNIT I	INTRODUCTION	10
Impact of Development on Environment and Environmental Impact Assessment (EIA) and Environmental Impact Statement (EIS) – Objectives – Historical development – EIA Types – EIA in project cycle – capacity and limitations – Legal provisions on EIA – Environmental Impact Assessment Notifications – Environmental Impact Assessment Consultants – Selection & Registration Criteria.		

UNIT II CLIMATE AND WEATHER 7

Factors affecting global, regional and local climates. Tropical, Monsoon, Polar, Desert, Mid-latitude climates and their role in global climate change. Antarctica, Greenland and the North Pole case studies.

UNIT III ELEMENTS AND PROCESSES RELATED TO CLIMATE CHANGE 8

Structure and driving forces of the earth. Earth's carbon reservoirs- marine and terrestrial carbon cycles. The Atmosphere - Radiation budget, Circulation, Stability, Chemistry of Atmosphere. Global wind systems, weather maps. Importance of water, Global Ocean Circulation. Industrialization and urbanization - Greenhouse gases, lifestyle changes.

UNIT IV IMPACTS OF GLOBAL CLIMATE CHANGE 15

The Greenhouse effect – ecosystems and species interactions, global warming, sea level rise, ozone problem, El Nino and southern oscillation, storms, thunderstorms, tornadoes, changes in agricultural production, droughts, spread of epidemics, wildfires and other extreme weather events. Nuclear winter.

UNIT V CLIMATE CHANGE MITIGATION / ADAPTATION 10

Climate change and the political realm. Mission of the Intergovernmental Panel on Climate Change. International agreements and protocols. Future use of energy and fossil fuels. Role of Governments, industries, and individuals. Concept of CDM and carbon finance.

TOTAL = 45 PERIODS

**CE 9048 MUNICIPAL SOLID WASTE MANAGEMENT L T P C
3 0 0 3**

OBJECTIVE:

To make the students conversant with different aspects of the types, sources, generation, storage, collection, transport, processing and disposal of municipal solid waste.

UNIT I SOURCES AND TYPES 8

Sources and types of municipal solid wastes-Waste generation rates-factors affecting generation, characteristics-methods of sampling and characterization; Effects of improper disposal of solid wastes-Public health and environmental effects. Elements of solid waste management – Municipal solid waste (M&H) rules- Integrated management.- Social and Financial aspects; Public awareness; Role of NGO's.

UNIT II SOURCE REDUCTION AND ON-SITE STORAGE 8

Source reduction of waste- Reduction, Reuse and Recycling - On-site storage methods- Effect of storage, materials used for containers- segregation of solid wastes – Public health and economic aspects of open storage – waste segregation and storage – case studies under Indian conditions.

UNIT III COLLECTION AND TRANSFER 8

Methods of Residential and commercial waste collection – Collection vehicles – Manpower – Collection routes – Analysis of collection systems; Transfer stations – Selection of location, operation & maintenance; options under Indian conditions – Field problems – solving.

UNIT IV PROCESSING OF WASTES 12

Objectives of waste processing – Physical Processing techniques and Equipments; Resource recovery from solid waste composting and biomethanation ; Thermal processing options- case studies under Indian conditions.

UNIT V DISPOSAL 9

Land disposal of solid waste; Sanitary land fills – site selection, design and operation of sanitary landfills –Landfill liners - Management of leachate and landfill gas – Land fill bioreactor.-Dumpsite Rehabilitation.

TOTAL: 45 PERIODS

CE 9049	INDUSTRIAL WASTEWATER POLLUTION PREVENTION AND CONTROL	L T P C
		3 0 0 3

OBJECTIVE:

Students should be conversant with extent of minimizing the generation of wastes and application of control techniques for recovery, reuse and disposal of wastes in Indian Industries.

UNIT I INDUSTRIAL POLLUTION SCENARIO 7

Industrial scenario in India – sources, generation rates and characteristics of Industrial wastewaters – Environmental impacts – Regulatory Requirements for industrial wastewaters.

UNIT II INDUSTRIAL POLLUTION PREVENTION 7

Prevention Vs control of Industrial Pollution – Benefits and Barriers – Waste Minimisation Strategies – Waste Minimisation Circles – Zero Discharge concept.

UNIT III TREATMENT OF INDUSTRIAL WASTEWATERS 12

Physico – chemical treatment processes – Equalization, Neutralization, Oil Separation, Precipitation, Biological treatment processes – Aerobic and Anaerobic Reactors, Tertiary Treatment Processes for removal of dissolved organics and inorganics.

UNIT IV WASTEWATER REUSE AND RESIDUAL MANAGEMENT 7

Individual and Common Effluent Treatment Plants – Zero Effluent discharge systems – Quality requirements for reuse – Residuals of industrial wastewater treatments – Treatment of hazardous sludge – Solidification – Incineration – secured Land fills – Regulatory requirements – Leachate Treatment.

UNIT V CASE STUDIES 12

Sources, characteristics and waste treatment Flow sheets for selected industries – Tanneries, Textiles, Dairy, Sugar, Pulp and Paper, Distilleries, Refineries, Thermal Power Plants.

TOTAL: 45 PERIODS

CE 9050

AIR POLLUTION CONTROL

**L T P C
3 0 0 3**

OBJECTIVE:

To impart knowledge on the sources, effects and control techniques of air pollutants and noise pollution.

UNIT I INTRODUCTION 9

Sources and classification of air pollutants and their effect on human health, vegetation and property – Global issues and Air pollution – Ambient air quality and emission standards – Air pollution indices – Indoor Air Pollutants – Air quality Sampling and Monitoring.

UNIT II AIR POLLUTION METEOROLOGY & DISPERSION MODELS 8

Fundamentals of meteorology – Wind roses – Atmospheric stability – Plume behaviour – Atmospheric diffusion theories – Plume rise – Gaussian Dispersion Models – Application.

UNIT III CONTROL TECHNOLOGIES 16

Principles and Equipment description of control technologies – Gravitational, Centrifugal, Filtration and Electrostatic Precipitator for control of particulate air pollutants – Absorption, adsorption, Condensation, incineration and Bio-filtration for control of gaseous air pollutants – Case studies.

UNIT IV EMERGING TRENDS 7
 Radioactive pollution and its control - Automobile Air Pollution and its Control – Ultraviolet photolysis – High efficiency Particulate Air Filters – Control of Indoor Air Quality.

UNIT V NOISE POLLUTION & CONTROL 5
 Sources, effects and control of noise – Noise standards – Measurement – Control and Preventive measures.

TOTAL: 45 PERIODS

TEXT BOOKS:

CE 9051 PAVEMENT ENGINEERING L T P C
3 0 0 3

OBJECTIVES:

Student gains knowledge on various IRC guidelines for designing rigid and flexible pavements. Further, he / she will be in a position to assess quality and serviceability conditions of roads.

UNIT I TYPES OF PAVEMENT AND STRESS DISTRIBUTION ON LAYERED SYSTEM 8

Introduction – Pavement as layered structure – Pavement types: rigid and flexible. Resilient modulus - Stress and deflections in pavements under repeated loading.

UNIT II DESIGN OF FLEXIBLE PAVEMENTS 10

Flexible pavement design - factors influencing design of flexible pavement, Empirical - Semi empirical and theoretical methods – Design procedure as per IRC guidelines – Design and specification of rural roads.

UNIT III DESIGN OF RIGID PAVEMENTS 9

Cement concrete pavements - factors influencing CC pavements – Modified Westergaard approach – Design procedure as per IRC guidelines – Concrete roads and their scope in India.

UNIT IV PERFORMANCE EVALUATION AND MAINTENANCE 10

Pavement Evaluation - causes of distress in rigid and flexible pavements – Evaluation based on Surface Appearance, Cracks, Patches and Pot Holes, Undulations, Raveling, Roughness, Skid Resistance. Structural Evaluation by Deflection Measurements - Pavement Serviceability index - Pavement maintenance (IRC Recommendations only).

UNIT V STABILISATION OF PAVEMENTS 8
 Stabilization with special reference to highway pavements – Choice of stabilisers – Testing and field control Stabilization for rural roads in India – use of Geosynthetics in roads.

TOTAL: 45 PERIODS

TEXT BOOKS:

1. Wright P.H. "Highway Engineers", John Wiley and Sons, Inc. New York, 1996
2. Khanna, S.K. and Justo C.E.G., "Highway Engineering", New Chand and Brothers, (8th Edition), Roorkee, 2001.

CE 9052 INTRODUCTION TO SOIL DYNAMICS AND MACHINE FOUNDATIONS L T P C 3 0 0 3

OBJECTIVES:

At the end of the course, student is expected to assess various design dynamic properties of soil, design of foundation for common machineries and also about the measures to isolate vibration due to the operations of machines.

UNIT I THEORY OF VIBRATION 9
 Vibration of elementary systems-vibratory motion-single degree freedom system-free and forced vibration with and without damping. Principles of vibration measuring instruments.

UNIT II WAVES AND WAVE PROPAGATION 9
 Wave propagation in an elastic homogeneous isotropic medium-Rayleigh, shear and compression waves-waves in elastic half space.

UNIT III DYNAMIC PROPERTIES OF SOILS 9
 Elastic properties of soils-coefficient of elastic uniform and non-uniform compression and shear-effect of vibration dissipative properties of soils-determination of dynamic properties of soil-codal provisions.

UNIT IV DESIGN PROCEDURES 9
 Design criteria – dynamic loads – simple design procedures for foundations of reciprocating, impact and rotary type machines - Codal provisions (Simple cases).

UNIT V VIBRATION ISOLATION 9
 Vibration isolation technique - foundation isolation- isolation by location-isolation by barriers-active and passive isolation methods.

TOTAL: 45 PERIODS

CE 9053

**GEOTECHNICAL ENGINEERING PROCESSES
AND APPLICATIONS**

**L T P C
3 0 0 3**

OBJECTIVES:

At the end of the course student gains knowledge to study the various process involved in stabilising problematic soils and also mitigate the geotechnical problems associated with natural disaster.

UNIT I REGIONAL DEPOSITS AND WASTE MATERIALS 9

Geotechnical problems associated with alluvial, lateritic and black cotton soils, solid wastes like municipal waste and flyash; characterization, prediction and improvement of their properties -Applications; case studies.

UNIT II ENVIROMENTAL PROBLEMS ASSOCIATED WITH GEOTECHNICAL ENGINEERING 9

Environmental problems related to soil contamination - waste generation - geotechnical engineering: vibration problems and control; Rain induced land slides. Bearing capacity and compressibility of land fills. Site remediation - utilization of waste for improvement of site.

UNIT III IN-SITU TREATMENT 10

In-situ treatment of soils: Dynamic consolidation, Vibraflotation, Sand pile, Stone columns – Grouting – Equipments and methods. In-situ treatment of cohesive soils- Electrical and thermal methods, Preloading with sand drains, lime piles.

UNIT IV SOIL REINFORCEMENT 8

Concepts of Reinforced Earth – Types of reinforcement – Applications to footings and earth retaining walls.

UNIT V GEOTEXTILES AND GEOGRIDS 9

Geogrids as reinforcement, Geotextiles in filtration, drainage and road works: Applications.

TOTAL: 45 PERIODS

CE 9054**ROCK ENGINEERING****L T P C
3 0 0 3****OBJECTIVE:**

To impart knowledge on fundamentals of rock mechanics and its application in solving simple problems associated with rock slopes and underground openings. Student gains the knowledge on the mechanics of rock and its applications in underground structures and rock slope stability analysis.

UNIT I CLASSIFICATION AND INDEX PROPERTIES OF ROCKS 6

Geological classification – Index properties of rock systems – Classification of rock masses for engineering purpose.

UNIT II ROCK STRENGTH AND FAILURE CRITERIA 12

Modes of rock failure – Strength of rock – Laboratory and field measurement of shear, tensile and compressive strength. Stress - strain behaviour of rock under compression – Mohr - Coulomb failure criteria and empirical criteria for failure – Deformability of rock.

UNIT III INITIAL STRESSES AND THEIR MEASUREMENTS 10

Estimation of initial stresses in rocks – influence of joints and their orientation in distribution of stresses – measurements of in-situ stresses.

UNIT IV APPLICATION OF ROCK MECHANICS IN ENGINEERING 10

Simple engineering application – Underground openings – Rock slopes – Foundations and mining subsidence.

UNIT V ROCK BOLTING 7

Introduction – Rock bolt systems – Choice of rock bolt based on rock mass condition - rock bolt installation techniques – Testing of rock bolts.

CARTOGRAPHY

L T P C
3 0 2 4

OBJECTIVE:

The main objective of this course, is to introduce Cartography, and its elements as the Art and Science of Map Making. The course also describes its connections with the Communication Science and Digital Computer as structured and need based information of Spatial Data.

UNIT I FUNDAMENTALS OF CARTOGRAPHY 9

Cartography today – Nature of Cartography – History of Cartography – Cartographic Visualization – Web Cartography – Graticules – Cartometry – Map Characteristics - Modern Trends.

UNIT II EARTH 9

Earth-Map Relations – Basic Geodesy – Map Projections – Scale – Reference and Coordinate system – Transformation – Basic Transformation – Affine Transformation.

UNIT III SOURCES OF DATA 9

Sources of data – Ground Survey and Positioning – Remote Sensing data collection – Census and sampling – data – Models for digital cartographic information – Map digitising.

UNIT IV PERCEPTION AND DESIGN 9

Cartographic design – Colour theory and models – Colour and pattern creation and specification – colour and pattern – Typography and lettering the map – Map compilation – Demography and Statistical mapping.

UNIT V CARTOGRAPHY ABSTRACTION 9

Selection and Generalisation Principles – Symbolisation – Topographic and thematic maps – Map production and Reproduction – Map series.

GI 9254**ELECTRONIC SURVEYING****L T P C
3 0 2 4****OBJECTIVE:**

To understand the working of EDM equipment and solve the surveying problems with an EDM equipment.

UNIT I FUNDAMENTALS**5**

Methods of Measuring Distance, Basic Principles of EDM, Historical Development Classifications, applications and comparison with conventional surveying.

UNIT II BASIC ELECTRONICS**10**

Oscillators (Crystal controlled and Gunn diode) Kerrcell / Pockel's modulator, Frequency mixing, modulation and Demodulation Measurement of phase differences, reflectors (Corner, Antenna), Transducers and power sources.

UNIT III ELECTROMAGNETIC WAVES**20**

Classification and applications of Electromagnetic waves, Propagation properties, wave propagation at lower and higher frequencies. Refractive index, factors affecting RI, Computation of group refractive index for light and near infrared waves at standard conditions and ambient conditions. Computation of RI for microwaves. Reference refractive index. Real time application of first velocity correction. Measurement of atmospheric parameters. Mean refractive index, Second velocity correction, Total atmospheric correction, Use of temperature and pressure transducers.

UNIT IV ELECTROMAGNETIC DISTANCE MEASURING SYSTEM**10**

Electro-optical system: Measuring principle ,Working principle, Sources of Error, Infrared and Laser EDM instruments. Microwave system: Measuring principle, Working principle, Sources of Error, Microwave EDM instruments. Comparison between Electro-optical and Microwave system. Total station and its applications. Care and maintenance of EDM instruments. Modern positioning systems.

UNIT V FIELD WORK**30**

Study of different EDM instruments and Total station. Setting out works, Base line Measurement, EDM traversing: observations and computation of area Trilateration.

(L = 45 + P : 30) TOTAL: 75 PERIODS**TEXT BOOKS:**

OBJECTIVES:

The Objective of this course is to introduce the students to the cadastral survey Methods and its applications in generation of Land information system. Cadastral surveys are those classes of land surveys which are executed for the purpose of systematically recording the land rights, producing register of land holdings or an inventory of land areas, land use and determine land tax.

UNIT I INTRODUCTION**8**

History of cadastral survey – Types of survey – Tax – Real Property – Legal cadastre – Graphical and Numerical Cadastre.

UNIT II CADASTRAL SURVEY METHODS**12**

Steps in survey of a village – Instruments used for cadastral survey & mapping – Orthogonal, Polar survey methods – Boundary survey – Rectangulation – Calculation of area of Land.

UNIT III CADASTRAL SURVEY MAINTENANCE**10**

Resurveys – Measurement of sub-division – Measurement of obstructed lines – Survey of urban areas – Control requirement for urban survey

UNIT IV MAPPING**5**

Photogrammetry for cadastral surveying and mapping – Orthophoto map – GPS for cadastral survey.

UNIT V CADASTRAL MAP REPRODUCTION AND CADASTRAL OFFICES**10**

Map projection for cadastral maps – Conventional symbols – map – reproduction processes – Automated cadastral map LIS/GIS Organisation of cadastral offices in Tamil Nadu /India – Recent Developments & Modern Trends.

SURVEY ADJUSTMENTS

L T P C
3 0 0 3

OBJECTIVE:

To impart skills in survey calculation and adjustment to suit field conditions

UNIT I MEASUREMENT AND ERROR 9

Concepts of measurement and Error, types of errors, elementary concepts in probability, Reliability of measurement – significant figures. Error Propagation – linearization. Multivariate distribution, the error ellipse, weights and cofactors-Non-linear stochastic variables.

UNIT II THE CONCEPT OF ADJUSTMENT 9

Introduction - simple adjustment methods. The least squares method, Examples of least squares problems.

UNIT III LEAST SQUARES ADJUSTMENT 9

Techniques of least squares, the concept of weight, least squares adjustment of indirect Observations, least squared adjustment of observations only.

UNIT IV ELEMENTARY PROBABILITY THEORY 9

Random events and probability, Random variables, continuous probability distributions, The normal distribution, Expectation – measures of precision and accuracy, covariance and correlation, covariance, cofactor and weight matrices, introduction to sampling.

UNIT V VARIANCE COVARIANCE PROPAGATION 9

Introduction – Derivation of the propagation laws Examples, stepwise propagation, propagation of least squares adjustment of indirect observations, propagation least square adjustment of observations only.

TOTAL: 45 PERIODS

TEXT BOOK:

1. Mikhail, E.M. and Gracie G. Analysis and adjustment of Survey measurements, Van Nostrand Reinhold, New York, 1981

REFERENCE:

MA 9261

PROBABILITY AND STATISTICS

L T P C
3 1 0 4

AIM

To provide the required skills to apply the statistical tools in

OBJECTIVES:

The students will acquire

- Knowledge of the applications of various probability distributions.
- Exposure to statistical inference using statistical tools and quality control aspects.

UNIT I RANDOM VARIABLES**9 + 3**

Discrete and Continuous random variables – Moments – Moment generating functions – Binomial, Poisson, Geometric, Uniform, Exponential, Gamma, Weibull and Normal distributions - Functions of a random variable.

UNIT II TWO-DIMENSIONAL RANDOM VARIABLES**9 + 3**

Joint distributions – Marginal and Conditional distributions – Covariance – Correlation and Linear regression – Transformation of random variables – Central limit theorem (for independent and identically distributed random variables).

UNIT III TESTING OF HYPOTHESIS**9 + 3**

Sampling distributions - Tests for single mean, proportion, Difference of means (large and small samples) – Tests for single variance and equality of variances – χ^2 -test for goodness of fit – Independence of attributes – Non-parametric tests: Test for Randomness and Rank-sum test (Wilcoxon test).

UNIT IV DESIGN OF EXPERIMENTS**9 + 3**

Completely randomized design – Randomized block design – Latin square design - 2^2 - factorial design.

UNIT V STATISTICAL QUALITY CONTROL**9 + 3**

Control charts for measurements (\bar{X} and R charts) – Control charts for attributes (p, c and np charts) – Tolerance limits - Acceptance sampling.

AIM

This course gives a complete procedure for solving numerically different kinds of problems occurring in engineering and technology.

OBJECTIVES:

The students would be acquainted with the basic concepts of numerical methods and their applications.

UNIT I SOLUTION OF EQUATIONS AND EIGENVALUE PROBLEMS 9 + 3

Solution of algebraic and transcendental equations – Fixed point iteration method – Newton-Raphson method – Solution of linear system of equations – Gauss Elimination method – Pivoting – Gauss-Jordan methods – Matrix Inversion by Gauss-Jordan method – Iterative methods of Gauss-Jacobi and Gauss-Seidel – Eigenvalues of a matrix by Power method and by Jacobi's method.

UNIT II INTERPOLATION AND APPROXIMATION 9 + 3

Interpolation with unequal intervals – Lagrange interpolation – Newton's divided difference interpolation – Cubic Splines – Interpolation with equal intervals – Newton's forward and backward difference formulae.

UNIT III NUMERICAL DIFFERENTIATION AND INTEGRATION 9 + 3

Approximation of derivatives using interpolation polynomials – Numerical integration using Trapezoidal, Simpson's 1/3 and Simpson's 3/8 rules – Romberg's method – Two point and three point Gaussian quadrature formulae – Evaluation of double integrals by Trapezoidal and Simpson's rules.

UNIT IV INITIAL VALUE PROBLEMS FOR ORDINARY DIFFERENTIAL EQUATIONS 9+ 3

Single step-methods – Taylor's series method – Euler's method – Fourth order Runge-Kutta method for solving first and second order equations – Multi-step methods – Milne's and Adams-Bashforth predictor-corrector methods for solving first order equations.

UNIT V BOUNDARY VALUE PROBLEMS IN ORDINARY AND PARTIAL DIFFERENTIAL EQUATIONS 9+3

Finite difference methods for solving two-point linear boundary value problems. Finite difference techniques for the solution of two dimensional Laplace's and Poisson's equations on rectangular domain – One dimensional heat-flow equation by explicit and implicit (Crank Nicholson) methods - One dimensional wave equation by explicit method.

GE 9075 INTELLECTUAL PROPERTY RIGHTS (IPR)

L T P C
3 0 0 3

OBJECTIVES:

- To create an awareness on Intellectual Property Rights (IPR)
- To understand patents and copyrights
- To know about application procedures of IPR

UNIT I TYPES OF PROPERTY 9

Introduction – Invention and Creativity – Intellectual Property (IP) – Importance – Protection of IPR – Basic types of property (i). Movable Property ii. Immovable Property and iii. Intellectual Property.

UNIT II PATENTS AND APPLICATION PROCEDURES 9

IP – Patents – Copyrights and related rights – Trade Marks and rights arising from Trademark registration – Definitions – Industrial Designs and Integrated circuits – Protection of Geographical Indications at national and International levels – Application Procedures..

UNIT III INTERNATIONAL PARTICES 9

International convention relating to Intellectual Property – Establishment of WIPO – Mission and Activities – History – General Agreement on Trade and Tariff (GATT).

UNIT IV LEGISLATIONS AND POLICY 9

Indian Position Vs WTO and Strategies – Indian IPR legislations – commitments to WTO- Patent Ordinance and the Bill – Draft of a national Intellectual Property Policy – Present against unfair competition.

UNIT V CASE STUDIES 9

Case Studies on – Patents (Basumati rice, turmeric, Neem, etc.) – Copyright and related rights – Trade Marks – Industrial design and Integrated circuits – Geographic indications – Protection against unfair competition.

OBJECTIVES:

- To expose the fundamental rights and constitutional remedies
- To understand the structure and functions of Central and State Governments
- To know the social structure and rights of weaker sections.

UNIT I CONSTITUTION OF INDIA 9

Historical Background – Constituent Assembly of India – Philosophical foundations of the Indian Constitution – Preamble – Fundamental Rights – Directive Principles of State Policy – Fundamental Duties – Citizenship – Constitutional Remedies for citizens.

UNIT II UNION GOVERNMENT 9

Union Government – Structures of the Union Government and Functions – President – Vice President – Prime Minister – Cabinet – Parliament – Supreme Court of India – Judicial Review.

UNIT III STATE GOVERNMENT 9

State Government – Structure and Functions – Governor – Chief Minister – Cabinet – State Legislature – Judicial System in States – High Courts and other Subordinate Courts.

UNIT IV FEDERAL SYSTEM 9

Indian Federal System – Center – State Relations – President's Rule – Constitutional Amendments – Constitutional Functionaries - Assessment of working of the Parliamentary System in India.

UNIT V SOCIETY AND RIGHTS 9

Society : Nature, Meaning and definition; Indian Social Structure; Caste, Religion, Language in India; Constitutional Remedies for citizens – Political Parties and Pressure Groups; Right of Women, Children and Scheduled Castes and Scheduled Tribes and other Weaker Sections.

OBJECTIVES:

Students should be conversant with contract procedures, legal requirements and labour regulations.

UNIT I CONSTRUCTION CONTRACTS 10

Indian Contracts Act – Elements of Contracts – Types of Contracts – Features – Suitability – Design of Contract Documents – International Contract Document – Standard Contract Document – Law of Torts

UNIT II TENDERS 10

Prequalification – Bidding – Accepting – Evaluation of Tender from Technical, Contractual and Commercial Points of View – Contract Formation and Interpretation – Potential Contractual Problems – World Bank Procedures and Guidelines – Transparency in Tenders Act.

UNIT III ARBITRATION 5

Comparison of Actions and Laws – Agreements – Subject Matter – Violations – Appointment of Arbitrators – Conditions of Arbitration – Powers and Duties of Arbitrator – Rules of Evidence – Enforcement of Award – Costs

UNIT IV LEGAL REQUIREMENTS 10

Insurance and Bonding – Laws Governing Sale, Purchase and Use of Urban and Rural Land – Land Revenue Codes – Tax Laws – Income Tax, Sales Tax, Excise and Custom Duties and their Influence on Construction Costs – Legal Requirements for Planning – Property Law – Agency Law – Local Government Laws for Approval – Statutory Regulations

UNIT V LABOUR REGULATIONS 10

Social Security – Welfare Legislation – Laws relating to Wages, Bonus and Industrial Disputes, Labour Administration – Insurance and Safety Regulations – Workmen's Compensation Act – Indian Factory Act – Tamil Nadu Factory Act – Child Labour Act - Other Labour Laws

TOTAL: 45 PERIODS**TEXT BOOK:**

1. Gajaria G.T., Laws Relating to Building and Engineering Contracts in India, M.M.Tripathi Private Ltd., Bombay, 1982.

REFERENCES:

1. Tamilnadu PWD Code, 1986.
2. Jimmie Hinze, Construction Contracts, Second Edition, McGraw Hill, 2001.
3. Joseph T. Bockrath, Contracts and the Legal Environment for Engineers and Architects, Sixth Edition, McGraw Hill, 2000.

AIM

To provide comprehensive knowledge about the principles, practices, tools and techniques of Total quality management.

OBJECTIVES

- To under the various principles, practices of TQM to achieve quality
- To learn the various statistical approaches for quality control.
- To understand the TQM tools for continuous process improvement.
- To learn the importance of ISO and Quality systems.

UNIT I INTRODUCTION 9

Introduction - Need for quality - Evolution of quality - Definition of quality - Dimensions of manufacturing and service quality - Basic concepts of TQM - Definition of TQM – TQM Framework - Contributions of Deming, Juran and Crosby – Barriers to TQM.

UNIT II TQM PRINCIPLES 9

Leadership – Strategic quality planning, Quality statements - Customer focus – Customer orientation, Customer satisfaction, Customer complaints, Customer retention - Employee involvement – Motivation, Empowerment, Team and Teamwork, Recognition and Reward, Performance appraisal - Continuous process improvement – PDSA cycle, 5s, Kaizen - Supplier partnership – Partnering, Supplier selection, Supplier Rating.

UNIT III TQM TOOLS & TECHNIQUES I 9

The seven traditional tools of quality – New management tools – Six-sigma: Concepts, methodology, applications to manufacturing, service sector including IT – Bench marking – Reason to bench mark, Bench marking process – FMEA – Stages, Types.

UNIT IV TQM TOOLS & TECHNIQUES II 9

Quality circles – Quality Function Deployment (QFD) – Taguchi quality loss function – TPM – Concepts, improvement needs – Cost of Quality – Performance measures.

UNIT V QUALITY SYSTEMS 9

Need for ISO 9000- ISO 9000-2000 Quality System – Elements, Documentation, Quality auditing- QS 9000 – ISO 14000 – Concepts, Requirements and Benefits – Case studies of TQM implementation in manufacturing and service sectors including IT.

TOTAL: 45 PERIODS**TEXT BOOK**

1. Dale H.Besterfiled, et at., "Total Quality Management", Pearson Education Asia,Third Edition, Indian Reprint (2006).

REFERENCES

1. James R. Evans and William M. Lindsay, "The Management and Control of Quality", 6th Edition, South-Western (Thomson Learning), 2005.
2. Oakland, J.S. "TQM – Text with Cases", Butterworth – Heinemann Ltd., Oxford, 3rd Edition, 2003.
3. Suganthi,L and Anand Samuel, "Total Quality Management", Prentice Hall (India) Pvt. Ltd.,2006.
4. Janakiraman,B and Gopal, R.K, "Total Quality Management – Text and Cases", Prentice Hall (India) Pvt. Ltd., 2006.

AIM

To sensitize the engineering students on blending both technical and ethical responsibilities.

OBJECTIVES

- Identify the core values that shape the ethical behavior of an engineer.
- Utilize opportunities to explore one's own values in ethical issues.
- Become aware of ethical concerns and conflicts.
- Enhance familiarity with codes of conduct.
- Increase the ability to recognize and resolve ethical dilemmas.

UNIT I ENGINEERING ETHICS 9

Senses of 'Engineering Ethics' – Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Professions and Professionalism – Professional Ideals and Virtues – Uses of Ethical Theories.

UNIT II ENGINEERING AS SOCIAL EXPERIMENTATION 9

Engineering as Experimentation – Engineers as responsible Experimenters – Research Ethics - Codes of Ethics – Industrial Standards - A Balanced Outlook on Law – The Challenger Case Study

UNIT III ENGINEER'S RESPONSIBILITY FOR SAFETY 9

Safety and Risk – Assessment of Safety and Risk – Risk Analysis – Reducing Risk – The Government Regulator's Approach to Risk - I Case Studies Chernoby and Bhopal

UNIT IV RESPONSIBILITIES AND RIGHTS 9

Collegiality and Loyalty – Respect for Authority – Collective Bargaining – Confidentiality – Conflicts of Interest – Occupational Crime – Professional Rights – Employee Rights – Intellectual Property Rights (IPR) - Discrimination

UNIT V GLOBAL ISSUES 9

Multinational Corporations – Business Ethics - Environmental Ethics – Computer Ethics - Role in Technological Development – Weapons Development – Engineers as Managers – Consulting Engineers – Engineers as Expert Witnesses and Advisors – Honesty – Moral Leadership – Sample Code of Conduct

TOTAL: 45 PERIODS

TEXT BOOKS

1. Mike Martin and Roland Schinzinger, "Ethics in Engineering", McGraw Hill, New York (2005).
2. Charles E Harris, Michael S Pritchard and Michael J Rabins, "Engineering Ethics Concepts and Cases", Thompson Learning, (2000).

REFERENCES

1. Charles D Fleddermann, "Engineering Ethics", Prentice Hall, New Mexico, (1999).
2. John R Boatright, "Ethics and the Conduct of Business", Pearson Education, (2003)
3. Edmund G Seebauer and Robert L Barry, "Fundamentals of Ethics for Scientists and Engineers", Oxford University Press, (2001)
4. Prof. (Col) P S Bajaj and Dr. Raj Agrawal, "Business Ethics – An Indian Perspective", Biztantra, New Delhi, (2004)
5. David Ermann and Michele S Shauf, "Computers, Ethics and Society", Oxford University Press, (2003)

AIM

To make the students understand the importance, relevance and potentialities of this emerging field of study.

OBJECTIVES

- Study the basic nano technology and nano science.
- Understand interdisciplinary nature of this field.
- Understand the importance role of physics, chemistry, biology.
- Recognize that the rules of nano science are fundamentally different than those we experience.
- Study the basic fabrication strategies of nano science.

UNIT I INTRODUCTION 10

Nanoscale Science and Technology- Implications for Physics, Chemistry, Biology and Engineering-Classifications of nanostructured materials- nano particles- quantum dots, nanowires-ultra-thinfilms-multilayered materials. Length Scales involved and effect on properties: Mechanical, Electronic, Optical, Magnetic and Thermal properties. Introduction to properties and motivation for study (qualitative only).

UNIT II PREPARATION METHODS 10

Bottom-up Synthesis-Top-down Approach: Precipitation, Mechanical Milling, Colloidal routes, Self-assembly, Vapour phase deposition, MOCVD, Sputtering, Evaporation, Molecular Beam Epitaxy, Atomic Layer Epitaxy, MOMBE.

UNIT III PATTERNING AND LITHOGRAPHY FOR NANOSCALE DEVICES 5

Introduction to optical/UV electron beam and X-ray Lithography systems and processes, Wet etching, dry (Plasma /reactive ion) etching, Etch resists-dip pen lithography

UNIT IV PREPARATION ENVIRONMENTS 10

Clean rooms: specifications and design, air and water purity, requirements for particular processes, Vibration free environments: Services and facilities required. Working practices, sample cleaning, Chemical purification, chemical and biological contamination, Safety issues, flammable and toxic hazards, biohazards.

UNIT V CHARACTERISATION TECHNIQUES 10

X-ray diffraction technique, Scanning Electron Microscopy - environmental techniques, Transmission Electron Microscopy including high-resolution imaging, Surface Analysis techniques- AFM, SPM, STM, SNOM, ESCA, SIMS-Nanoindentation

TOTAL : 45 PERIODS
